**PRIORITY DOCUMENT**  
SUBMITTED OR TRANSMITTED IN  
COMPLIANCE WITH  
RULE 17.1(a) OR (b)

I, the undersigned, being an officer duly authorised in accordance with Section 74(1) and (4) of the Deregulation & Contracting Out Act 1994, to sign and issue certificates on behalf of the Comptroller-General, hereby certify that annexed hereto is a true copy of the documents as originally filed in connection with the patent application identified therein.

In accordance with the Patents (Companies Re-registration) Rules 1982, if a company named in this certificate and any accompanying documents has re-registered under the Companies Act 1980 with the same name as that with which it was registered immediately before re-registration save for the substitution as, or inclusion as, the last part of the name of the words "public limited company" or their equivalents in Welsh, references to the name of the company in this certificate and any accompanying documents shall be treated as references to the name with which it is so re-registered.

In accordance with the rules, the words "public limited company" may be replaced by p.l.c., plc, P.L.C. or PLC.

Re-registration under the Companies Act does not constitute a new legal entity but merely subjects the company to certain additional company law rules.

*P. Mahoney*

## Request for grant of a patent

*See the notes on the back of this form. You can also get an explanatory leaflet from the Patent Office to help you fill in this form.*

The Patent Office

Cardiff Road  
Newport  
South Wales  
NP10 8QQ

Your reference

P15725

Patent application number

*(The Patent Office will fill in this part)*

0208120.6

Full name, address and postcode of the or of each applicant *(underline all surnames)*

ELI LILLY AND COMPANY,  
LILLY CORPORATE CENTER,  
INDIANAPOLIS,  
INDIANA 46285, USA

Patents ADP number *(if you know it)*

428904002

If the applicant is a corporate body, give the country/state of its incorporation

STATE OF INDIANA, U.S.A.

Title of the invention

GROWTH HORMONE SECRETAGOGUES

Name of your agent *(if you have one)*

DR IVAN J BURNSIDE

"Address for service" in the United Kingdom to which all correspondence should be sent *(including the postcode)*

LILLY RESEARCH CENTRE,  
ERL WOOD MANOR,  
WINDLESHAM,  
SURREY, GU20 6PH, UK

Patents ADP number *(if you know it)*

8359861001

If you are declaring priority from one or more earlier patent applications, give the country and the date of filing of the or of each of these earlier applications and *(if you know it)* the or each application number

Country

Priority application number  
*(if you know it)*

Date of filing  
*(day / month / year)*

If this application is divided or otherwise derived from an earlier UK application, give the number and the filing date of the earlier application

Number of earlier application

Date of filing  
*(day / month / year)*

Is a statement of inventorship and of right to grant of a patent required in support of this request? *(Answer 'Yes' if:*

Yes

- a) any applicant named in part 3 is not an inventor, or
  - b) there is an inventor who is not named as an applicant, or
  - c) any named applicant is a corporate body.
- See note (d))

## Patents Form 1/77

9. Enter the number of sheets for any of the following items you are filing with this form. Do not count copies of the same document

Continuation sheets of this form

Description 76

Claim(s) 9 DML

Abstract 1

Drawing(s)

10. If you are also filing any of the following, state how many against each item.

Priority documents

Translations of priority documents

Statement of inventorship and right to grant of a patent (Patents Form 7/77)

Request for preliminary examination and search (Patents Form 9/77)

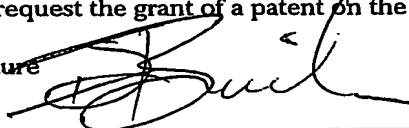

Request for substantive examination (Patents Form 10/77)

Any other documents (please specify)

11.

I/We request the grant of a patent on the basis of this application

Signature

Date 8 April 200

12. Name and daytime telephone number of person to contact in the United Kingdom

Dr Ivan J Burnside

### Warning

After an application for a patent has been filed, the Comptroller of the Patent Office will consider whether publication or communication of the invention should be prohibited or restricted under Section 22 of the Patents Act 1977. You will be informed if it is necessary to prohibit or restrict your invention in this way. Furthermore, if you live in the United Kingdom, Section 23 of the Patents Act 1977 stops you from applying for a patent abroad without first getting written permission from the Patent Office unless an application has been filed at least 6 weeks beforehand in the United Kingdom for a patent for the same invention and either no direction prohibiting publication or communication has been given, or any such direction has been revoked.

### Notes

- If you need help to fill in this form or you have any questions, please contact the Patent Office on 08459 50050
- Write your answers in capital letters using black ink or you may type them.
- If there is not enough space for all the relevant details on any part of this form, please continue on a separate sheet of paper and write "see continuation sheet" in the relevant part(s). Any continuation sheet should be attached to this form.
- If you have answered 'Yes' Patents Form 7/77 will need to be filed.
- Once you have filled in the form you must remember to sign and date it.
- For details of the fee and ways to pay please contact the Patent Office.

**GROWTH HORMONE SECRETAGOGUES**

Growth hormone, which is secreted by the pituitary gland, has wide-ranging developmental effects on the organism. Artificial manipulation of growth hormone levels has been demonstrated to have significant therapeutic utility. Human growth hormone supplementation has been shown to be an effective treatment for growth hormone deficiencies and their related disease states in humans. Apart from this application, studies have uncovered new and significant properties of growth hormone which lend further importance to the ability to control growth hormone levels. For example, clinical studies have indicated that growth hormone supplementation may be useful in combating the maladies of ageing in humans. Elevated growth hormone levels in animals have been shown to result in increased lean muscle mass. One application of this latter observation could result in higher production of leaner meat products or in the production of larger and/or stronger animals.

While growth hormone is naturally produced by the pituitary gland, the secretion of growth hormone into the bloodstream is controlled by a second protein, Growth Hormone Releasing Factor (GRF). This hormone is also commonly known in the art as somatocrinin, Growth Hormone Releasing Hormone (GHRH), and Growth Releasing Hormone (GRH).

There are two ways to approach the problem of increasing circulating levels of growth hormone: (1) increase the level of human growth hormone in the organism directly or (2) increase the organism's natural tendency to produce growth hormone. The latter strategy may be achieved via supplementation with GRF. GRF has been demonstrated to increase the circulatory levels of growth

hormone in vivo. (Rivier, et al., Nature (London), 300:276 (1982). The effect of GRF, including structural analogs thereof, on growth hormone production has been widely studied. A primary obstacle to the use of GRF as a direct  
5 supplement is its short lifespan in vivo. L.A. Frohman, et al., Journal of Clinical Investigation, 78:906 (1986). More potent and/or longer lasting GRF molecules are therefore desirable for the development of effective human therapeutic or animal husbandry agents.

10 The structure of GRF has been modified in numerous ways resulting in longer lasting and/or more potent GRF analogs. It has been demonstrated that the first 29 amino acids from the N-terminus are sufficient to retain full GRF activity. Speiss, et al., Biochemistry, 21:6037 (1982). One strategy  
15 has been the incorporation of novel D-amino acid residues in various regions of the GRF molecule. V.A. Lance, et al., Biochemical and Biophysical Research Communications, 119:265 (1984); D.H. Coy, et al., Peptides, 8(suppl. 1):49 (1986). Another strategy has modified the peptide backbone of GRF by  
20 the incorporation of peptide bond isosteres in the N-terminal region. D. Tourwe, Janssen. Chim. Acta, 3:3 (1985); S.J. Hocart, et al., Journal of Medicinal Chemistry, 33:1954-58 (1990). A series of very active analogs of GHRH is described in European Patent Publication 511,003,  
25 published October 28, 1992.

In addition to the actions of GHRH there are various ways known to release growth hormone. For example, chemicals such as arginine, L-3,4-dihydroxyphenylalanine (L-DOPA), glucagon, vasopressin, and insulin-induced  
30 hypoglycemia, as well as activities such as sleep and exercise, indirectly cause growth hormone to be released from the pituitary by acting in some fashion on the hypothalamus, perhaps either to decrease somatostatin secretion or to increase the secretion of GHRH.

In cases where increased levels of growth hormone are desired, the problem has generally been solved by providing exogenous growth hormone or by administering GHRH, or a related peptidyl compound which stimulates growth hormone production or release. In either instance the peptidyl nature of the compound has necessitated that it be administered by injection.

Other compounds have been developed which stimulate the release of endogenous growth hormone, such as analogous peptidyl compounds related to GHRH. These peptides, while considerably smaller than growth hormones are still susceptible to metabolic instability.

Administration of the hexapeptide growth hormone releasing peptide-6 (GHRP-6) results in the secretion of growth hormone in many species, including humans. This peptide is one of a series of synthetic peptides, the structures of which were based on the pentapeptide Met-enkephalin. It has been shown that GHRP binds specifically to the pituitary, although the binding does not involve the opioid, GHRH, or the somatostatin receptors.

In recent years significant efforts have been taken to develop nonpeptidyl analogs of this series of compounds. Such compounds, termed growth hormone secretagogues, should be orally bioavailable, induce the production or release of growth hormone, and act in concert, or synergistically with GHRH. These compounds are non-peptidyl in nature and are, therefore, more metabolically stable than growth hormone, growth hormone releasing hormone, or analogs of either of these proteins.

The compounds of this invention are especially desired due to the enhanced in vivo pharmaceutical activity of the compounds.

The present invention relates to compounds of Formula I

Formula I

wherein:

R1 is (substituted C<sub>1</sub>-C<sub>6</sub>alkyl)NHR<sub>10</sub> or (unsubstituted  
5 or substituted C<sub>3</sub>-C<sub>8</sub> cycloalkyl)NHR<sub>10</sub>;

R<sub>10</sub> is hydrogen, C<sub>1</sub>-C<sub>6</sub>alkyl, C<sub>1</sub>-C<sub>6</sub>alkyl(OH), C<sub>1</sub>-  
C<sub>6</sub>alkylidenyl(OH)R<sub>11</sub>, or an amino protecting group;

R<sub>11</sub> is C<sub>1</sub>-C<sub>6</sub>alkyl, C<sub>2</sub>-C<sub>6</sub>alkenyl, C<sub>1</sub>-C<sub>6</sub>alkyl(O)C<sub>1</sub>-C<sub>6</sub>alkyl,  
C(O)O-C<sub>1</sub>-C<sub>6</sub>alkyl, aryl, or C<sub>1</sub>-C<sub>6</sub>alkylaryl;

10 R<sub>2</sub> is hydrogen, C<sub>1</sub>-C<sub>6</sub>alkyl, aryl, or C<sub>1</sub>-C<sub>6</sub>alkylaryl;

R<sub>3</sub> is unsubstituted or substituted aryl, unsubstituted  
or substituted C<sub>1</sub>-C<sub>6</sub>alkylaryl, unsubstituted or substituted  
C<sub>1</sub>-C<sub>6</sub>alkyl(O)-C<sub>1</sub>-C<sub>6</sub>alkylaryl, unsubstituted or substituted  
C<sub>3</sub>-C<sub>8</sub> cycloalkyl, unsubstituted or substituted (C<sub>1</sub>-C<sub>6</sub> alkyl)  
15 C<sub>3</sub>-C<sub>8</sub> cycloalkyl, indolyl, indolynyl, (C<sub>1</sub>-C<sub>6</sub> alkyl) indolyl;

R<sub>4</sub> is hydrogen, C<sub>1</sub>-C<sub>6</sub>alkyl, aryl, C<sub>1</sub>-C<sub>6</sub>alkylaryl, or  
C<sub>2</sub>-C<sub>6</sub>alkenyl;

R<sub>5</sub> is hydrogen, aryl, C<sub>1</sub>-C<sub>6</sub>alkylaryl, hydroxy, C<sub>1</sub>-  
C<sub>6</sub>alkoxy, unsubstituted or substituted C<sub>1</sub>-C<sub>6</sub>alkyl;

20 R<sub>6</sub> and R<sub>7</sub> are independently hydrogen, unsubstituted or  
substituted C<sub>1</sub>-C<sub>6</sub>alkyl, unsubstituted or substituted C<sub>2</sub>-  
C<sub>6</sub>alkenyl, or R<sub>6</sub> and R<sub>7</sub> together with the carbon atom to  
which they are attached form a carbocyclic ring of up to 8  
atoms which is optionally partly unsaturated or a  
25 substituted C<sub>3</sub>-C<sub>8</sub> cycloalkyl group which is optionally  
partly unsaturated;

R8 is hydrogen, unsubstituted or substituted C<sub>1</sub>-C<sub>6</sub>alkyl, unsubstituted or substituted aryl, or unsubstituted or substituted C<sub>1</sub>-C<sub>6</sub>alkylaryl;

5 R9 is hydrogen, C<sub>1</sub>-C<sub>6</sub>alkyl, C<sub>2</sub>-C<sub>6</sub>alkenyl, C<sub>2</sub>-C<sub>6</sub>alkynyl, C<sub>3</sub>-C<sub>8</sub>cycloalkyl, C<sub>3</sub>-C<sub>8</sub>cycloalkenyl, cyano, unsubstituted or substituted aryl, unsubstituted or substituted -O-aryl, unsubstituted or substituted -N-aryl, unsubstituted or substituted -S-aryl, -aryl-aryl(K1)(K2), -O-aryl-aryl(K1)(K2), -N-aryl-aryl(K1)(K2), -S-aryl-aryl(K1)(K2), -O-  
0 C<sub>1</sub>-C<sub>6</sub>alkyl, or C<sub>1</sub>-C<sub>6</sub>alkylaryl, wherein K1 is halo or -CF<sub>3</sub>, and K2 is hydrogen, halo or -CF<sub>3</sub> or K1 and K2 together form a methylenedioxy group;

Q is -S(O)<sub>2</sub>- or -C(O)-;

m is a number selected from 1 or 2;

5 or a pharmaceutically acceptable salt or solvate thereof.

The present invention further relates to pharmaceutical formulations containing compounds of formula I, alone or in combination with other growth hormone secretagogue  
20 compounds, and/or in combination with suitable bone-antiresorptive agents, and the use of said compounds and/or formulations at least for the increase in endogenous levels of growth hormone in a mammal.

The present invention yet further relates to methods  
25 for the treatment or prevention of a physiological condition which may be modulated by an increase in endogenous growth hormone, which method comprises administering to an animal in need of said treatment an effective amount of a compound of formula I.

30 A preferred embodiment of the invention is a compound of Formula II

Formula II

wherein

R1, R2, R3, R5, R6, R7, R8, R9 and Q are as defined for  
 5 formula I above or a pharmaceutically acceptable salt or  
 solvate thereof.

A further preferred embodiment of the invention is a  
 compound of Formula III

Formula III

or a pharmaceutically acceptable salt or solvate thereof,  
 wherein:

R12 is hydrogen, methyl or ethyl;

15 R13 is unsubstituted or substituted aryl, unsubstituted  
 or substituted 3-arylpropyl, unsubstituted or substituted 2-  
 arylethyl, unsubstituted or substituted arylmethoxymethyl,

-7-

unsubstituted or substituted 3-indolylmethyl, or  
unsubstituted or substituted cyclohexylmethyl;

R15 is hydrogen, methyl, ethyl, n-propyl, isopropyl,  
hydroxy, methoxy, 2-hydroxyethyl, 2-fluoroethyl, or 2,2,2-  
5 trifluoroethyl;

R16 and R17 are hydrogen, methyl, ethyl, fluoromethyl,  
trifluoromethyl, 2-fluoroethyl, or 2,2,2-trifluoroethyl or  
together with the carbon atom to which they are attached  
form a cyclopentane, cyclohexane, fluorocyclohexane or  
10 difluorocyclohexane ring;

R18 is hydrogen, methyl, ethyl, arylmethyl, 2-  
hydroxyethyl, 2-fluoroethyl, or 2,2,2-trifluoroethyl;

R19 is thienyl, naphthyl, thiazolyl, oxazolyl, pyridyl,  
O-phenyl, or phenyl, which are unsubstituted or substituted  
15 with one or more substituents independently selected from  
the group consisting of C<sub>1</sub>-C<sub>6</sub> alkyl, C<sub>1</sub>-C<sub>6</sub> alkoxy, CONH<sub>2</sub>,  
CONH(C<sub>1</sub>-C<sub>6</sub> alkyl), NHCO(C<sub>1</sub>-C<sub>6</sub> alkyl), SO<sub>2</sub>NH<sub>2</sub>, SO<sub>2</sub>NH(C<sub>1</sub>-C<sub>6</sub>  
alkyl), NHSO<sub>2</sub>(C<sub>1</sub>-C<sub>6</sub> alkyl), COOH, COO(C<sub>1</sub>-C<sub>6</sub> alkyl), hydroxy,  
nitro, halo, SO<sub>2</sub>(C<sub>1-6</sub> alkyl), SO<sub>2</sub>CF<sub>3</sub>, CF<sub>3</sub>, OCF<sub>3</sub> and cyano.

20 The present invention additionally relates to compounds  
of formula IV and pharmaceutically acceptable salts or  
solvates thereof in which R12 to R19 have the same  
definition as in Formula III:

Formula IV

The present invention still further relates to processes for the preparation of compounds of formula I.

5       The terms and abbreviations used herein have their normal meanings unless otherwise designated. For example "°C" refers to degrees Celsius; "N" refers to normal or normality; "mmol" refers to millimole or millimoles; "g" refers to gram or grams; "ml" means milliliter or  
10 milliliters; "M" refers to molar or molarity; "MS" refers to mass spectrometry; "FDMS" refers to field desorption mass spectrometry; "IS" refers to ion spray ionisation; "EI" refers to electron impact ionisation; "UV" refers to ultraviolet spectroscopy; "IR" refers to infrared  
15 spectroscopy; and "NMR" refers to nuclear magnetic resonance spectroscopy.  
"TBTU" refers to O-(1H-benzotriazol-1-yl)-N,N,N',N'-pentamethylene-uronium tetrafluoroborate.

20       As used herein, the term "C<sub>1</sub>-C<sub>6</sub> alkyl" refers to straight or branched, monovalent, saturated aliphatic chains of 1 to 6 carbon atoms and includes, but is not limited to, methyl, ethyl, propyl, isopropyl, butyl, isobutyl, t-butyl, pentyl, isopentyl, and hexyl. The term "C<sub>1</sub>-C<sub>6</sub> alkyl"  
25 includes within its definition the term "C<sub>1</sub>-C<sub>4</sub> alkyl".

      The term "substituted C<sub>1</sub>-C<sub>6</sub> alkyl" means a C<sub>1</sub>-C<sub>6</sub> alkyl group as defined above which has been substituted by one or more, preferably from one to three groups selected from halo (preferably chloro or fluoro), hydroxy, -OC<sub>1</sub>-C<sub>6</sub> alkyl,  
30 cyano, SO<sub>2</sub>(C<sub>1</sub>-C<sub>6</sub> alkyl), OCF<sub>3</sub>, CF<sub>3</sub>, CONH<sub>2</sub> or NO<sub>2</sub>.

      As used herein, the term "C<sub>2</sub>-C<sub>6</sub> alkenyl" refers to straight or branched, monovalent, unsaturated aliphatic chains of 2 to 6 carbon atoms including at least one carbon-carbon double bond and includes, but is not limited to,

ethenyl, propenyl, isopropenyl, butenyl, isobutenyl, pentenyl, isopentenyl, and hexenyl. The term "C<sub>2</sub>-C<sub>6</sub> alkenyl" includes within its definition the term "C<sub>2</sub>-C<sub>4</sub> alkenyl".

5 As used herein, the term "C<sub>2</sub>-C<sub>6</sub> alkynyl" refers to straight or branched, monovalent, unsaturated aliphatic chains of 2 to 6 carbon atoms including at least one carbon-carbon triple bond and includes, but is not limited to, ethynyl, propynyl, butynyl, isobutynyl, pentynyl,  
10 isopentynyl, and hexynyl. The term "C<sub>2</sub>-C<sub>6</sub> alkynyl" includes within its definition the term "C<sub>2</sub>-C<sub>4</sub> alkynyl".

The term "substituted C<sub>2</sub>-C<sub>6</sub> alkenyl" means a C<sub>2</sub>-C<sub>6</sub> alkenyl group as defined above which has been substituted by one or more, preferably from one to three groups selected  
15 from halo (preferably chloro or fluoro), hydroxy, -OC<sub>1</sub>-C<sub>6</sub> alkyl, cyano, SO<sub>2</sub>(C<sub>1</sub>-C<sub>6</sub> alkyl), OCF<sub>3</sub>, CF<sub>3</sub>, CONH<sub>2</sub> or NO<sub>2</sub>.

As used herein, the term "cycloalkyl" refers to cyclized chains of 3 to 8 carbon atoms and includes, but is not limited to, cyclopropyl, cyclobutyl, cyclopentyl, and  
20 cyclohexyl.

The term "substituted C<sub>3</sub>-C<sub>8</sub> cycloalkyl" means a C<sub>3</sub>-C<sub>8</sub> cycloalkyl group as defined above which has been substituted by one or more, preferably from one to three groups selected from halo (preferably chloro or fluoro), -OC<sub>1</sub>-C<sub>6</sub> alkyl,  
25 cyano, SO<sub>2</sub>(C<sub>1</sub>-C<sub>6</sub> alkyl), OCF<sub>3</sub>, CF<sub>3</sub>, CONH<sub>2</sub> or NO<sub>2</sub>.

The term "halo" means chloro, fluoro, bromo or iodo. Halo may most preferably be fluoro or chloro.

"C<sub>1</sub>-C<sub>6</sub> alkoxy" represents a straight or branched alkyl chain having from one to six carbon atoms attached to an  
30 oxygen atom. Typical C<sub>1</sub>-C<sub>6</sub> alkoxy groups include methoxy, ethoxy, propoxy, isopropoxy, butoxy, t-butoxy, pentoxy and the like. The term "C<sub>1</sub>-C<sub>6</sub> alkoxy" includes within its definition the term "C<sub>1</sub>-C<sub>4</sub> alkoxy".

"C<sub>2</sub>-C<sub>6</sub> alkanoyl" represents a straight or branched alkyl chain having from one to five carbon atoms attached through a carbonyl moiety. Typical C<sub>2</sub>-C<sub>6</sub> alkanoyl groups include ethanoyl (also referred to as acetyl), propanoyl, 5 isopropanoyl, butanoyl, t-butanoyl, pentanoyl, hexanoyl, and the like.

"C<sub>1</sub>-C<sub>6</sub> alkylidenyl" refers to a straight or branched, divalent, saturated aliphatic chain of one to six carbon atoms and includes, but is not limited to, methylenyl, 10 ethylenyl, propylenyl, isopropylenyl, butylenyl, isobutylenyl, t-butylenyl, pentylenyl, isopentylenyl, hexylenyl, and the like.

The term "aryl" represents an aromatic ring or rings and aromatic residues of 5 to 7-membered mono- or bicyclic 15 rings with 1 to 4 heteroatoms (a "heteroaryl") including but not limited to such groups as phenyl, naphthyl, biphenyl, thiophenyl (also known as thienyl), benzothiophenyl, furanyl, benzofuranyl, oxazolyl, indolyl, pyridyl, thiazolyl, isoxazolyl, isothiazolyl and the like.

20 The term "substituted aryl", "substituted N-aryl", and "substituted S-aryl" means that each of the respective aryl groups (which aryl group may contain heteroatoms as described above), is substituted, at any available position, with from one to four substituents, independently selected 25 from the group consisting of C<sub>1</sub>-C<sub>6</sub> alkyl, -OC<sub>1</sub>-C<sub>6</sub> alkyl, -OCF<sub>3</sub>, amide, aryl, aryloxy, SO<sub>2</sub>(C<sub>1-6</sub> alkyl), SO<sub>2</sub>CF<sub>3</sub>, NHamide, carboxamide, sulfonamide, Nhsulfonamide, imide, hydroxy, carboxy, nitro, halo, tri(chloro or fluoro)methyl, and cyano. The aromatic ring may be attached at any carbon atom 30 or heteroatom which affords a stable structure. The group, 3,4-methylenedioxyphenyl is embraced by this definition.

The term "unsubstituted C<sub>1</sub>-C<sub>6</sub> alkylaryl" means an unsubstituted C<sub>1</sub>-C<sub>6</sub> alkyl group, as defined above, bonded to an unsubstituted aryl group as defined above. In preferred

unsubstituted C<sub>1</sub>-C<sub>6</sub> alkylaryl groups the unsubstituted C<sub>1</sub>-C<sub>6</sub> alkyl moiety has from 1 to 3 carbon atoms. Also, and independently, in preferred unsubstituted C<sub>1</sub>-C<sub>6</sub> alkylaryl groups the aryl group is selected from phenyl, thiazolyl, pyridyl, naphthyl, thienyl, isoxazolyl, oxazolyl and indolyl.

The term "substituted C<sub>1</sub>-C<sub>6</sub> alkylaryl" means either an unsubstituted or substituted C<sub>1</sub>-C<sub>6</sub> alkyl group, as defined above, bonded to a substituted aryl group as defined above or a substituted C<sub>1</sub>-C<sub>6</sub> alkyl group as defined above bonded to an unsubstituted aryl group as defined above. In preferred compounds of the invention substituted C<sub>1</sub>-C<sub>6</sub> alkylaryl denotes an C<sub>1</sub>-C<sub>6</sub> alkyl group as defined above, bonded to a substituted aryl group as defined above. In more preferred substituted C<sub>1</sub>-C<sub>6</sub> alkylaryl groups the unsubstituted C<sub>1</sub>-C<sub>6</sub> alkyl moiety has from 1 to 3 carbon atoms. Also, and independently, in more preferred substituted C<sub>1</sub>-C<sub>6</sub> alkylaryl groups the substituted aryl group is selected from phenyl, thiazolyl, pyridyl, naphthyl, thienyl, oxazolyl, isoxazolyl or indolyl substituted, at any available position, by from one to four, preferably one, two or three, substituents independently selected from halo (preferably chloro or fluoro), C<sub>1</sub>-C<sub>6</sub> alkyl, -OC<sub>1</sub>-C<sub>6</sub> alkyl, cyano, SO<sub>2</sub>(C<sub>1</sub>-C<sub>6</sub> alkyl), OCF<sub>3</sub>, CF<sub>3</sub>, CONH<sub>2</sub>, NO<sub>2</sub>, phenyl, phenoxy, thienyl, pyridyl, thiazolyl, oxazolyl, furanyl, benzothiophenyl, benzofuranyl.

The term "unsubstituted C<sub>1</sub>-C<sub>6</sub> alkyl(O)-C<sub>1</sub>-C<sub>6</sub> alkyl aryl" means an unsubstituted C<sub>1</sub>-C<sub>6</sub> alkyl(O)-C<sub>1</sub>-C<sub>6</sub> alkyl group, as defined above, bonded to an unsubstituted aryl group as defined above. In preferred unsubstituted C<sub>1</sub>-C<sub>6</sub> alkyl(O)-C<sub>1</sub>-C<sub>6</sub> alkylaryl groups the unsubstituted C<sub>1</sub>-C<sub>6</sub> alkyl(O)-C<sub>1</sub>-C<sub>6</sub> alkyl moiety is -CH<sub>2</sub>-O-CH<sub>2</sub>-, -CH<sub>2</sub>-O-CH<sub>2</sub>CH<sub>2</sub>-, or -CH<sub>2</sub>CH<sub>2</sub>-O-CH<sub>2</sub>-, most preferably -CH<sub>2</sub>-O-CH<sub>2</sub>-. Also, and independently, in preferred unsubstituted C<sub>1</sub>-C<sub>6</sub> alkyl(O)-C<sub>1</sub>-

C<sub>6</sub> alkylaryl groups the aryl group is selected from phenyl, thiazolyl, pyridyl, naphthyl, thienyl, oxazolyl, isoxazolyl and indolyl.

The term "substituted C<sub>1</sub>-C<sub>6</sub> alkyl(O)- C<sub>1</sub>-C<sub>6</sub> alkyl aryl" means either an unsubstituted or substituted C<sub>1</sub>-C<sub>6</sub> alkyl(O)- C<sub>1</sub>-C<sub>6</sub> alkyl group, as defined above, bonded to a substituted aryl group as defined above or a substituted C<sub>1</sub>-C<sub>6</sub> alkyl(O)- C<sub>1</sub>-C<sub>6</sub> alkyl group as defined above bonded to an unsubstituted aryl group as defined above. In preferred compounds of the invention substituted C<sub>1</sub>-C<sub>6</sub> alkyl(O)-C<sub>1</sub>-C<sub>6</sub> alkylaryl denotes an C<sub>1</sub>-C<sub>6</sub> alkyl(O)- C<sub>1</sub>-C<sub>6</sub> alkyl group as defined above, bonded to a substituted aryl group as defined above. In more preferred substituted C<sub>1</sub>-C<sub>6</sub> alkyl(O)-C<sub>1</sub>-C<sub>6</sub> alkylaryl groups the unsubstituted C<sub>1</sub>-C<sub>6</sub> alkyl(O)-C<sub>1</sub>-C<sub>6</sub> alkyl moiety is -CH<sub>2</sub>-O-CH<sub>2</sub>-, -CH<sub>2</sub>-O-CH<sub>2</sub>CH<sub>2</sub>-, or -CH<sub>2</sub>CH<sub>2</sub>-O-CH<sub>2</sub>-, most preferably -CH<sub>2</sub>-O-CH<sub>2</sub>-. Also, and independently, in more preferred substituted C<sub>1</sub>-C<sub>6</sub> alkyl(O)-C<sub>1</sub>-C<sub>6</sub> alkylaryl groups the substituted aryl group is selected from phenyl, thiazolyl, pyrifyl, naphthyl, thienyl, oxazolyl, isoxazolyl and indolyl substituted, at any available position, by from one to four, preferably one, two or three, substituents independently selected from halo (preferably chloro or fluoro), C<sub>1</sub>-C<sub>6</sub> alkyl, -OC<sub>1</sub>-C<sub>6</sub> alkyl, cyano, SO<sub>2</sub>(C<sub>1</sub>-C<sub>6</sub> alkyl), OCF<sub>3</sub>, CF<sub>3</sub>, CONH<sub>2</sub>, NO<sub>2</sub>, phenyl, phenoxy, thienyl, pyridyl, thiazolyl, oxazolyl, furanyl, benzothiophenyl, benzofuranyl.

The term "unsubstituted (C<sub>1</sub>-C<sub>6</sub> alkyl) C<sub>3</sub>-C<sub>8</sub> cycloalkyl" means an unsubstituted C<sub>1</sub>-C<sub>6</sub> alkyl group, as defined above, bonded to an unsubstituted C<sub>3</sub>-C<sub>8</sub> cycloalkyl group as defined above. In preferred unsubstituted (C<sub>1</sub>-C<sub>6</sub> alkyl) C<sub>3</sub>-C<sub>8</sub> cycloalkyl groups the unsubstituted C<sub>1</sub>-C<sub>6</sub> alkyl moiety has from 1 to 3 carbon atoms. Also, and independently, in more preferred unsubstituted (C<sub>1</sub>-C<sub>6</sub> alkyl) C<sub>3</sub>-C<sub>8</sub> cycloalkyl groups the C<sub>3</sub>-C<sub>8</sub> cycloalkyl group is cyclopentyl or cyclohexyl.

The term "substituted (C<sub>1</sub>-C<sub>6</sub> alkyl) C<sub>3</sub>-C<sub>8</sub> cycloalkyl" means either an unsubstituted or substituted C<sub>1</sub>-C<sub>6</sub> alkyl group, as defined above, bonded to a substituted C<sub>3</sub>-C<sub>8</sub> cycloalkyl group as defined above or a substituted C<sub>1</sub>-C<sub>6</sub> alkyl group as defined above bonded to an unsubstituted C<sub>3</sub>-C<sub>8</sub> cycloalkyl group as defined above. In preferred compounds of the invention substituted (C<sub>1</sub>-C<sub>6</sub> alkyl) C<sub>3</sub>-C<sub>8</sub> cycloalkyl denotes an C<sub>1</sub>-C<sub>6</sub> alkyl group as defined above, bonded to a substituted C<sub>3</sub>-C<sub>8</sub> cycloalkyl group as defined above. In more preferred substituted (C<sub>1</sub>-C<sub>6</sub> alkyl) C<sub>3</sub>-C<sub>8</sub> cycloalkyl groups the unsubstituted C<sub>1</sub>-C<sub>6</sub> alkyl moiety has from 1 to 3 carbon atoms. Also, and independently, in more preferred substituted (C<sub>1</sub>-C<sub>6</sub> alkyl) C<sub>3</sub>-C<sub>8</sub> cycloalkyl groups the substituted C<sub>3</sub>-C<sub>8</sub> cycloalkyl group cyclopentyl or cyclohexyl substituted, at any available position, by at least one and preferably from one to four substituents independently selected from halo (preferably chloro or fluoro), C<sub>1</sub>-C<sub>6</sub> alkyl, -OC<sub>1</sub>-C<sub>6</sub> alkyl, cyano, SO<sub>2</sub>(C<sub>1</sub>-C<sub>6</sub> alkyl), OCF<sub>3</sub>, CF<sub>3</sub>, CONH<sub>2</sub>, NO<sub>2</sub>, phenyl, phenoxy, thienyl, pyridyl, thiazolyl, oxazolyl, furanyl, benzothiophenyl, benzofuranyl.

The term "-O-aryl" means an aryloxy substituent which is bonded to the parent molecule through the O group. The term "unsubstituted or substituted -O-aryl" means that the aryl group of the -O-aryl substituent is unsubstituted or substituted with from one to four substituents independently selected from the group consisting of C<sub>1</sub>-C<sub>6</sub> alkyl, -OC<sub>1</sub>-C<sub>6</sub> alkyl, -OCF<sub>3</sub>, amide, aryl, aryloxy, SO<sub>2</sub>(C<sub>1</sub>-C<sub>6</sub> alkyl), NHamide, CF<sub>3</sub>SO<sub>2</sub>, carboxamide, sulfonamide, Nhsulfonamide, imide, hydroxy, carboxy, nitro, halo, tri(chloro or fluoro)methyl, and cyano.

The term "-aryl-aryl(K1)(K2)" refers to an aryl group substituted with an additional aryl group said additional aryl group being disubstituted with K1 and K2. K1 is defined to include halo and -CF<sub>3</sub>, and K2 is defined to

include hydrogen, halo, and  $-CF_3$ . Alternatively K1 and K2 together may form a methylenedioxy group. Similarly, the terms "-O-aryl-aryl(K1)(K2)", "-N-aryl-aryl(K1)(K2)", and "-S-aryl-aryl(K1)(K2)" are likewise defined. For example, the  
5 term "-O-aryl-aryl(K1)(K2)" means an aryloxy substituent as defined above which is substituted with an additional aryl group, said additional aryl group being disubstituted with K1 and K2. K1 and K2 are as defined immediately above.

The term "carboxy-protecting group" as used herein  
10 refers to substituents of the carboxy group commonly employed to block or protect the carboxy functionality while reacting other functional groups on the compound. Examples of such protecting groups include methyl, ethyl, p-nitrobenzyl, p-methylbenzyl, p-methoxybenzyl, 3,4-  
15 dimethoxybenzyl, 2,4-dimethoxybenzyl, 2,4,6-trimethoxybenzyl, 2,4,6-trimethylbenzyl, pentamethylbenzyl, 3,4-methylene-dioxybenzyl, benzhydryl, 4,4'-dimethoxybenzhydryl, 2,2',4,4'-tetramethoxybenzhydryl, t-butyl, t-amyl, trityl, 4-methoxytrityl, 4,4'-dimethoxytrityl, 4, 4',  
20 4"-trimethoxytrityl, 2-phenylprop-2-yl, trimethylsilyl, t-butyl dimethylsilyl, phenacyl, 2,2,2-trichloroethyl, 2-(di(n-butyl)methylsilyl)ethyl, p-toluenesulfonyl ethyl, 4-nitrobenzylsulfonyl ethyl, allyl, cinnamyl, 1-(trimethylsilylmethyl)prop-1-en-3-yl, and the like.  
25 A preferred carboxy-protecting group for the practice of the present invention is methyl or ethyl. Further examples of these groups may be found in E. Haslam, supra, at Chapter 5, and T.W. Greene, et al., supra, at Chapter 5.

The term "amino-protecting group" as used herein  
30 refers to substituents of the amino group commonly employed to block or protect the amino functionality while reacting other functional groups on the compound. Examples of such amino-protecting groups can be found at T.W. Greene, et al., supra.

Examples of such amino-protecting groups include, but are not limited to, formyl, trityl, phthalimido, trichloroacetyl, chloroacetyl, bromoacetyl, iodoacetyl, and urethane-type blocking groups such as benzyloxycarbonyl, 4-phenylbenzyloxycarbonyl, 2-methylbenzyloxycarbonyl, 4-methoxybenzyloxycarbonyl, 4-fluorobenzyloxycarbonyl, 4-chlorobenzyloxycarbonyl, 3-chlorobenzyloxycarbonyl, 2-chlorobenzyloxycarbonyl, 2,4-dichlorobenzyloxycarbonyl, 4-bromobenzyloxycarbonyl, 3-bromobenzyloxycarbonyl, 4-nitrobenzyloxycarbonyl, 4-cyanobenzyloxycarbonyl, n-butoxycarbonyl, (NBoc) t-butoxycarbonyl, 1,1-diphenyleth-1-yloxycarbonyl, 1,1-diphenylprop-1-yloxycarbonyl, 2-phenylprop-2-yloxycarbonyl, 2-(p-toluy1)-prop-2-yloxycarbonyl, cyclopentanyloxycarbonyl, 1-methylcyclopentanyloxycarbonyl, cyclohexanyloxycarbonyl, 1-methylcyclohexanyloxycarbonyl, 2-methylcyclohexanyloxycarbonyl, 2-(4-toluy1sulfonyl)-ethoxycarbonyl, 2-(methy1sulfonyl)ethoxycarbonyl, 2-(triphenylphosphino)-ethoxycarbonyl, fluorenylmethoxy-carbonyl (Fmoc), 2-(trimethylsilyl)ethoxycarbonyl, allyloxycarbonyl, 1-(trimethylsilylmethyl)prop-1-enyloxycarbonyl, 5-benzisoxaly1methoxycarbonyl, 4-acetoxybenzyloxycarbonyl, 2,2,2-trichloroethoxycarbonyl, 2-ethynyl-2-propoxycarbonyl, cyclopropylmethoxycarbonyl, 4-(decyloxy)benzyloxycarbonyl, isobornyloxycarbonyl, 1-piperidyloxycarbonyl, and the like; benzoylmethylsulfonyl group, 2-nitrophenylsulfenyl, diphenylphosphine oxide and like amino-protecting groups.

The amino-protecting group employed is usually not critical so long as the derivatized amino group is stable to the condition of subsequent reactions on other positions of the intermediate molecule, and may be selectively removed at

the appropriate point without disrupting the remainder of the molecule including any other amino-protecting groups. A preferred amino-protecting group for the practice of the present invention is t-butoxycarbonyl (NBoc). Further  
5 examples of groups referred to by the above terms are described by E. Haslam, Protective Groups in Organic Chemistry, (J.G.W. McOmie, ed., 1973), at Chapter 2; and T.W. Greene and P.G.M. Wuts, Protective Groups in Organic Synthesis (1991), at Chapter 7.

10 The term "activating group" as used herein refers a leaving group which, when taken with the carbonyl ( $-C=O$ ) group to which it is attached, is more likely to take part in an acylation reaction than would be the case if the group were not present, as in the free acid. Such activating  
15 groups are well-known to those skilled in the art and may be, for example, succinimidoxy, phthalimidoxy, benzotriazolyloxy, azido, chloro, bromo, fluoro or  $-O-CO-(C_4-C_7 \text{ alkyl})$ .

20 In the more preferred compounds of formula I wherein R1 is (substituted  $C_1-C_6$ alkyl)NHR10, R10 is selected from hydrogen and  $C_1-C_6$  alkyl and the substituted  $C_1-C_6$  alkyl group is a  $C_1-C_5$  alkyl group, which is more preferably branched, and which is substituted by from 1 to 3 halo  
25 atoms, most preferably fluoro atoms. Examples of more preferred R1 groups include  $-C(CH_2F)_2NH_2$ ,  $-C(CH_2F)(CH_2CH_2F)NH_2$ ,  $-C(CF_3)(CH_3)NH_2$ ,  $-C(CH_2CH_2F)_2NH_2$  and  $-C(CH_2CH_3)(CH_2CF_3)NH_2$ . In the most preferred compounds of the invention R1 is a group of formula  $-C(CH_2F)_2NH_2$ .

30 In the more preferred compounds of formula I wherein R1 is (unsubstituted or substituted  $C_3-C_8$  cycloalkyl)NHR10, R10 is selected from hydrogen and  $C_1-C_6$  alkyl and the  $C_3-C_8$  cycloalkyl group is unsubstituted. Still more preferably the  $C_3-C_8$  cycloalkyl group is such that the carbonyl and the -

NHR10 groups are connected at the same carbon atom.

Examples of more preferred R1 groups of this type include

In the more preferred compounds of formula I, R2 is  
 5 hydrogen or C<sub>1</sub>-C<sub>6</sub> alkyl, preferably methyl. In the most preferred compounds of the invention R2 is hydrogen.

In the more preferred compounds of formula I, R3 is an  
 unsubstituted or substituted aryl group, an unsubstituted or  
 substituted C<sub>1</sub>-C<sub>6</sub> alkylaryl group or an unsubstituted or  
 0 substituted C<sub>1</sub>-C<sub>6</sub>alkyl(O)- C<sub>1</sub>-C<sub>6</sub>alkyl aryl group wherein:

the C<sub>1</sub>-C<sub>6</sub>alkyl moiety within the unsubstituted or  
 substituted C<sub>1</sub>-C<sub>6</sub> alkylaryl group is methyl, ethyl or  
 propyl;

the C<sub>1</sub>-C<sub>6</sub>alkyl(O)-C<sub>1</sub>-C<sub>6</sub>alkyl moiety within the  
 1.5 unsubstituted or substituted C<sub>1</sub>-C<sub>6</sub>alkyl(O)- C<sub>1</sub>-C<sub>6</sub>alkyl aryl  
 group is a moiety of formula -CH<sub>2</sub>OCH<sub>2</sub>-;

the aryl moiety within said groups is selected from  
 phenyl, thiazolyl, pyridyl, naphthyl, thienyl, oxazolyl,  
 isoxazolyl and indolyl which is unsubstituted or substituted  
 2.0 by from one to three groups independently selected from halo  
 (preferably chloro or fluoro), methyl, methoxy, cyano,  
 SO<sub>2</sub>Me, trifluoromethyl, and trifluoromethoxy. Most  
 preferably the unsubstituted aryl moiety is phenyl,  
 naphthyl, thiazolyl or indolyl and the substituted aryl  
 2.5 moiety in said groups is 2-fluorophenyl, 3-fluorophenyl, 4-  
 fluorophenyl, 2,3-difluorophenyl, 2,4-difluorophenyl, 2,5-  
 difluorophenyl, 2,6-difluorophenyl, 3,4-difluorophenyl, 3,5-  
 difluorophenyl, 2,4,6-trifluorophenyl, 2,4,5-  
 trifluorophenyl, 2,3,6-trifluorophenyl, 2,3,5-  
 3.0 trifluorophenyl, 2-chlorophenyl, 3-chlorophenyl, 4-  
 chlorophenyl, 2,6-dichlorophenyl, 2-fluoro-6-chlorophenyl,  
 2-fluoro-3-chlorophenyl, 2-fluoro-4-chlorophenyl, 2,6-

1 difluoro-3-chlorophenyl, 4-trifluoromethylphenyl, 3-  
trifluoromethylphenyl, 2-trifluoromethylphenyl, 2-fluoro-5-  
trifluoromethylphenyl, 4-trifluoromethoxyphenyl, 3-  
trifluoromethoxyphenyl, 2-trifluoromethoxyphenyl, 2-  
5 cyanophenyl, 3-cyanophenyl, 4-cyanophenyl, 4-  
methanesulphonylphenyl, or 2-methyl thiazolyl.

In the more preferred compounds of formula I R4 is hydrogen or C<sub>1</sub>-C<sub>6</sub> alkyl. In the most preferred compounds of the invention R4 is hydrogen or methyl.

10 In the more preferred compounds of formula I R5 is hydrogen, C<sub>1</sub>-C<sub>6</sub> alkyl, hydroxy, C<sub>1</sub>-C<sub>6</sub>alkoxy, C<sub>1</sub>-C<sub>6</sub>alkyl which is substituted by hydroxy or C<sub>1</sub>-C<sub>6</sub>alkyl which is substituted by one, two, or three halo atoms, preferably fluoro or  
15 chloro. In the most preferred compounds of the invention R5 is hydrogen, methyl, ethyl, i-propyl, n-propyl, 2-fluoroethyl, 2-hydroxyethyl, 2,2,2-trifluoroethyl, hydroxy or methoxy.

In the more preferred compounds of formula I R6 and R7 are independently C<sub>1</sub>-C<sub>6</sub> alkyl groups; or R6 and R7 are  
20 independently C<sub>1</sub>-C<sub>6</sub>alkyl or C<sub>2</sub>-C<sub>6</sub>alkenyl, in which one or both groups are substituted by one, two, or three halo atoms; or R6 is hydrogen and R7 is C<sub>1</sub>-C<sub>6</sub>alkyl or C<sub>2</sub>-C<sub>6</sub>alkenyl which is substituted by one, two, or three halo atoms; or R6 and R7 together form a carbocyclic ring of up to 8 atoms  
25 or R6 and R7 together with the carbon atom to which they are attached may form a C<sub>3</sub>-C<sub>8</sub>cycloalkyl group which is optionally partly unsaturated and which is substituted by one, two, or three halo atoms. In the most preferred compounds of the invention R6 and R7 are both methyl, ethyl,  
30 fluoromethyl, trifluoromethyl, 2-fluoroethyl, or 2,2,2-trifluoroethyl; or R6 is hydrogen and R7 is trifluoromethyl, 2,2,2-trifluoroethyl, or 3,3,3-trifluoropropyl; or R6 and R7 together form a cyclohexane, cyclopentane, fluorocyclohexane or difluorocyclohexane ring.

In the more preferred compounds of formula I, R8 is hydrogen, C<sub>1</sub>-C<sub>6</sub>alkyl, benzyl, C<sub>1</sub>-C<sub>6</sub>alkyl which is substituted by hydroxy or C<sub>1</sub>-C<sub>6</sub>alkyl which is substituted by one, two, or three halo atoms, phenyl substituted by one, two, or three halo atoms or benzyl substituted by one, two, or three halo atoms. The Halo atoms are preferably fluoro or chloro. In the most preferred compounds of the invention R8 is hydrogen, methyl, ethyl, benzyl, 2-hydroxyethyl, 2-fluoroethyl, 2,2,2-trifluoroethyl.

In the more preferred compounds of formula I, R9 is C<sub>1</sub>-C<sub>6</sub> alkyl, C<sub>3</sub>-C<sub>8</sub> cycloalkyl, unsubstituted or substituted aryl, unsubstituted or substituted-O-aryl, or -aryl-aryl(K1)(K2) wherein K1 is halo or -CF<sub>3</sub> and K2 is hydrogen, halo or CF<sub>3</sub> or K1 and K2 together form a methylenedioxy group.

In preferred compounds of the invention wherein R9 is a C<sub>1</sub>-C<sub>6</sub> alkyl group, R9 is most preferably methyl or isopropyl. In preferred compounds of the invention wherein R9 is a C<sub>3</sub>-C<sub>8</sub> cycloalkyl group, R9 is most preferably cyclohexyl. In preferred compounds of the invention wherein R9 is an -aryl-aryl(K1)(K2) group, R9 is a -phenyl-phenyl(K1)(K2), or -phenyl-thienyl(K1)(K2) group, and most preferably is -phenyl-fluorophenyl, -phenyl-chlorophenyl, -phenyl-trifluoromethylphenyl, -phenyl-(3,4-methylenedioxyphenyl) or -phenyl-chlorothienyl.

In preferred compounds of the invention wherein R9 is an unsubstituted or substituted aryl or unsubstituted or substituted-O-aryl group, said unsubstituted or substituted aryl moiety is phenyl, naphthyl, pyridyl, thienyl, thiazolyl or oxazolyl, most preferably phenyl. Preferred optional substituents are halo (preferably chloro, fluoro or bromo), methyl, ethyl, propyl, t-butyl, trifluoromethyl, trifluoromethoxy, methoxy, ethoxy, cyano, methylsulphonyl, phenyl, phenoxy, thienyl, pyridyl, thiazolyl, oxazolyl,

nitro, CONH<sub>2</sub>, furanyl, benzothiophenyl and benzofuranyl. In the most preferred compounds of the invention wherein R<sub>9</sub> is an unsubstituted or substituted aryl or unsubstituted or substituted-O-aryl group, R<sub>9</sub> is selected from phenyl, 4-methylsulphonylphenyl, 3-methylsulphonylphenyl, 4-fluorophenyl, 2-fluorophenyl, 3-fluorophenyl, 3-chlorophenyl, 2-chlorophenyl, 4-chlorophenyl, 4-*t*-butylphenyl, 4-trifluoromethylphenyl, 3-trifluoromethylphenyl, 4-nitrophenyl, 3-nitrophenyl, 4-bromophenyl, 3-bromophenyl, 2-bromophenyl, 4-methylphenyl, 3-methylphenyl, 4-phenylphenyl, 3-phenylphenyl, 4-phenoxyphenyl, 3-phenoxyphenyl, 4-cyanophenyl, 3-cyanophenyl, 4-carbamoylphenyl, 4-methoxyphenyl, 3-methoxyphenyl, thienyl, thiazolyl, pyridyl, phenoxy, 4-chlorophenoxy, 2,3-dichlorophenyl, 3,4-dichlorophenyl, naphthyl, oxazolyl, 2,4-difluorophenyl, 3,4-difluorophenyl, 3,5-difluorophenyl, 2,3-difluorophenyl, 2,6-difluorophenyl, 2,5-difluorophenyl, 2-fluoro-3-chlorophenyl, 4-ethylphenyl, 4-ethoxyphenyl, 3,4,5-trifluoromethyl, 3-fluoro-4-chlorophenyl and 4-carbamoylphenyl.

It will be understood that the preferred definitions given above in respect of R<sub>2</sub>, R<sub>3</sub>, R<sub>5</sub>, R<sub>6</sub>, R<sub>7</sub>, R<sub>8</sub> and R<sub>9</sub> in formula I and II apply to the substituents within the definitions at the corresponding positions in formulae III and IV i.e. positions R<sub>12</sub>, R<sub>13</sub>, R<sub>15</sub>, R<sub>16</sub>, R<sub>17</sub>, R<sub>18</sub> and R<sub>19</sub> respectively.

Particularly preferred compounds of the invention are those set out in the following tables I to V and the pharmaceutically acceptable salts and solvates thereof:

-21-

The compounds of the present invention may be prepared by a number of routes, many of which are known to those of skill in the art. The particular order of steps to be employed in the synthesis of compounds of formula I is dependent upon the compound to be synthesized, the starting material employed, and the relative lability of the various substituted moieties.

During any of the following synthetic sequences it may be necessary or desirable to protect sensitive or reactive groups on any of the molecules concerned. This may be achieved by employing conventional protecting groups as described, *supra*.

The compounds used in the method of the present invention may have one or more asymmetric centers. As a consequence of these chiral centers, the compounds of the present invention occur as racemates, mixtures of enantiomers and as individual enantiomers, as well as diastereomers and mixtures of diastereomers. All asymmetric forms, individual isomers and combinations thereof, are within the scope of the present invention.

The terms "R" and "S" are used herein as commonly used in organic chemistry to denote specific configuration of a chiral center. The term "R" (*rectus*) refers to that configuration of a chiral center with a clockwise relationship of group priorities (highest to second lowest) when viewed along the bond toward the lowest priority group. The term "S" (*sinister*) refers to that configuration of a chiral center with a counterclockwise relationship of group priorities (highest to second lowest) when viewed along the bond toward the lowest priority group. The priority of groups is based upon their atomic number (in order of decreasing atomic number). A partial list of priorities and a discussion of stereochemistry is contained in *Nomenclature of Organic Compounds: Principles and Practice*, (J.H. Fletcher, et al., eds., 1974) at pages 103-120.

In addition to the (R)-(S) system, the older D-L system is also used in this document to denote absolute configuration, especially with reference to amino acids. In this system, a Fischer projection formula is oriented so that the number 1 carbon of the main chain is at the top. The prefix "D" is used to represent the absolute

configuration of the isomer in which the functional (determining) group is on the right side of the carbon atom at the chiral center and "L", that of the isomer in which it is on the left.

5        In order to preferentially prepare one optical isomer over its enantiomer, a number of routes are available. As an example, a mixture of enantiomers may be prepared, and then the two enantiomers may be separated. A commonly employed method for the resolution of the racemic mixture  
10 (or mixture of enantiomers) into the individual enantiomers is to first convert the enantiomers to diastereomers by way of forming a salt with an optically active acid or base. These diastereomers may then be separated using differential solubility, fractional crystallization, chromatography, or  
15 the like. Further details regarding resolution of enantiomeric mixtures may be found in J. Jacques, et al., Enantiomers, Racemates, and Resolutions, (1991).

Representative starting material for this synthesis is a compound of formula Va, which may be reacted with an  
20 ethynylamine of formula VI, with R6 and R7 as defined in Formula I, by methods known in the art to yield a compound of formula VII. Alternatively, a compound of formula Vb may be coupled with a compound of formula VI using activating agents for N-acylation reactions known in the art, like  
25 HOBT, DCC, EDC, oxalyl chloride, TBTU or other coupling reagents known to the skilled artisan, to result in a compound of formula VII. Preferred for the practice of the present invention is TBTU. Intermediates of formula Vb and VI are commercially available or can be prepared by methods  
30 known in the art. Intermediates of formula Va may be prepared from commercial compounds by standard methods as described in Tetrahedron Lett. 25 (1984), 4553-4556.

A compound of formula VII may be hydrated by standard methods to yield a compound of formula VIII and subsequently

cyclized by treatment with a deprotonating agent, such as sodium hydride, optionally in the presence of an alkylating agent to yield a compound of formula IX. Treatment of the resulting compound with a bromination reagent, such as N-bromosuccinimide, results in a compound of formula X. Reaction with an amine generates compounds of formula XI. Representative reactions are provided in Scheme A below. An example of formula IX where Q is  $\text{SO}_2$ , R8 is hydrogen and R9 is 4-chlorophenyl is described in Pestic. Sci. 39 (1993), 185-192.

**SCHEME A**

Scheme B shows an alternative synthesis for acety intermediates of Formula VIII:

**Scheme B**

Esters of aminoacids of Formula VI a, preferably methyl or ethyl esters, are coupled with derivatives of carboxylic acids or sulfonic acids of Formula V (with R20 meaning OH or Cl, respectively) by methods described in Scheme A to give intermediates of Formula VIIa. The esters are hydrolyzed by standard methods to give carboxylic acids of Formula VIIb. These are treated with organometallic methyl compounds to prepare the acetyl intermediates of Formula VIII. Preferred organometallic reagents are methyl Grignard reagents (M = MgCl, MgBr, or MgI) or methyl lithium (M = Li), more preferred is methyl lithium. Examples for this reaction are known from the literature, e.g. J. Org. Chem. 58 (1993), 4758; J. Org. Chem. 62 (1997), 6862; Tetrahedron Lett. 35 (1994), 3745. In a preferred method a solution of the carboxylic acid in a solvent like THF or DME is treated with an excess of methyl lithium in diethylether at a temperature below  $-60\text{ }^{\circ}\text{C}$  followed by warming to room temperature.

Compounds of Formula I in which  $m = 2$  may be prepared as shown in Scheme C below.

**SCHEME C**

A compound of formula XII is obtained by treatment of a protected methylamine with a deprotonating agent like butyllithium as described for example in Tetrahedron Lett. 35(24), 1994, 4067-70. The substituent "PG" means a protecting group, which is known to the artisan, and all other substituents are as defined by Formula I, herein. One preferred protecting group is the BOC group or another N-protecting group known in the art and stable under the reaction conditions. A compound of formula X is treated with a compound of formula XII to yield a compound of formula XIa.

It is to be understood that the bromine group on the compound of formula X may in fact be any suitable leaving group, as defined herein.

The term "leaving group" refers to a group of atoms that is displaced from a carbon atom by the attack of a nucleophile in a nucleophilic substitution reaction. Suitable leaving groups include bromo, chloro, and iodo, benzenesulfonyloxy, methanesulfonyloxy, and toluenesulfonyloxy. The term "leaving group" includes activating groups as defined above.

A second portion of the overall synthesis of compounds of formula I is provided in Scheme D below.

Representative starting material for this synthesis is a compound of formula XIIIa, which may be a chemically-protected derivative of the amino acid serine. By chemically-protected it is meant that both the amino- and carboxy- functional groups have been suitably protected in order to facilitate further reactions with this molecule. Such protection reactions are known to those of skill in the art, and may be applied to other suitable starting materials. Intermediates of formula XIIIa are commercially available, or may be prepared by standard syntheses of amino acids. Such syntheses are well known to persons of ordinary skill in the art and are described, for example, in Chemistry and Biochemistry of Amino Acids, (G.C. Chapman ed., 1985). The protected amino group may be specifically deprotected, e.g. if PG is a Boc group, using trifluoroacetic acid and methylene chloride, to allow for further reactions with this amino functional group. This deprotection reaction results in a compound of formula XIIIb.

A compound of formula XIIIb may then be N-acylated with an amino-protected compound of formula XIV for instance  $\text{HOOC}-(\text{substituted } \text{C}_1\text{-C}_6\text{alkyl})\text{NHR}_{10}$  or  $\text{HOOC}-(\text{unsubstituted or substituted } \text{C}_3\text{-C}_8 \text{ cycloalkyl})\text{NHR}_{10}$  wherein  $\text{R}_{10}$  is an amino protecting group (PG), to produce a compound of formula XIIIc.

Compounds of formula XIV are commercially available, or are readily prepared from suitable available starting materials. The protected carboxy group on the compound of formula XIIIc is then selectively deprotected, typically using lithium hydroxide, to generate a compound of formula XIII. A compound of formula XIII is then coupled with a

compound of formula XI and subsequently deprotected to generate a compound of formula Ia.

Representative reactions are provided below in Scheme D.

5

**Scheme D**

An alternative synthesis for compounds of formula Ia is shown in Scheme E below:

10

**Scheme E**

A compound of formula XIIIa, as defined for Scheme D, is selectively deprotected, typically using lithium hydroxide, to generate a compound of formula XIIId, which may then be employed to N-acylate a compound of formula XI, generating a compound of formula XV. Subsequent deprotection results in a compound of formula XVa. A compound of formula XVa is then coupled with a compound of formula XIV, as defined for Scheme D, and subsequently deprotected to generate a compound of formula I.

Suitable activating agents for the N-acylation reactions in Scheme D and Scheme E are known in the art and

include DCC, HOBT, EDC, and oxalyl chloride. Preferred for the practice of the present invention are HOBT or TBTU.

Compounds of formula XIII in which the starting material XIIIa is optionally substituted 2-Nboc-amino-5-  
5 arylpentanoic acid methyl ester, optionally substituted 2-Nboc-amino-4-arylbutanoic acid methyl ester or 2-Nboc-amino-3-(3-indolyl)-propionic acid methyl ester may also be prepared by the routes described in Scheme D and Scheme E.

Compounds of formula XIb may also be employed in the  
10 reactions described in Scheme D and Scheme E.

R1, R2, R3, R4, R5, R6, R7, R8, R9 and Q in Schemes A through E are as defined for Formula I.

The preferred reaction temperature range employed in these reactions is between -40 and 150 °C, and the most  
15 preferred range is between 10 and 40 °C. These reactions may be conveniently carried out in situ, without isolation of the particular compound after its preparation.

The compounds of the present invention can be useful for modulating growth hormone secretion and as research  
20 tools.

Compounds of formula I possess growth hormone secretagogue activity. Growth hormone secretagogue activity can be determined using a typical assay which may employ pituitary cells established in culture, followed by a  
25 challenge with the various compounds of formula I, and the levels of growth hormone determined accordingly. Growth hormone levels may be calculated using various radioimmunoassay techniques known to those of skill in the art. One example of such an assay is detailed herein.

30 Thus compounds of formula I find use in the treatment of physiological conditions which are modulated or ameliorated by an increase in endogenous growth hormone. In particular the compounds of formula I are useful in the treatment of conditions or diseases which cause or are

mediated by growth hormone deficiencies and maladies associated with ageing in humans. The compounds of formula I are hence useful in the treatment of osteoporosis, physiological short stature including growth hormone deficient children and short stature associated with chronic illness, growth retardation associated with the Prader-Willi syndrome, intrauterine growth retardation, pulmonary dysfunction and ventilator dependency, insulin resistance, cachexia and protein loss due to chronic illness such as cancer or AIDS, as well as congestive heart failure. The compounds of formula I also hence find use in improving muscle strength and mobility, metabolic homeostasis, renal homeostasis especially in the elderly, accelerating the recovery of patients having undergone trauma especially major surgery, improving a negative energy balance in a patient, accelerating bone fracture repair, preventing catabolic side effects associated with therapy, the attenuation of protein catabolic responses following major surgery, the acceleration of wound healing and the treatment of immunosuppressed patients. In this connection, compounds of formula I also find use in the manufacture of a medicament for the treatment of the human or animal body by therapy, in particular the therapeutic treatment of conditions or diseases which cause or are mediated by growth hormone deficiencies maladies associated with ageing in humans. In particular compounds of formula I also find use in the manufacture of a medicament for any of the specific uses indicated above.

The compounds of formula I also find use in a method of increasing endogenous levels of growth hormone in mammals and in particular humans and farm or companion animals. Thus the compounds of formula I find use in a method of promoting growth, in particular, increasing lean muscle mass, in an animal, in particular an animal farmed for food including

cow, sheep, pig and chicken. The compounds also find particular use in the treatment of disorders of ageing in companion animals.

The invention further encompasses methods employing the  
5 pharmaceutically acceptable salts of the compounds defined by formula I. Although generally neutral, a compound of this invention can possess a sufficiently acidic, a sufficiently basic, or both functional groups, and accordingly react with any of a number of inorganic bases,  
10 and inorganic and organic acids, to form a pharmaceutically acceptable salt.

The term "pharmaceutically acceptable salt" as used herein refers to salts of the compounds of formula I which are substantially non-toxic to living organisms. Typical  
15 pharmaceutically acceptable salts include those salts prepared by reaction of the compounds of the present invention with a pharmaceutically acceptable mineral or organic acid or an inorganic base. Such salts are known as acid addition and base addition salts.

20 Acids commonly employed to form acid addition salts are inorganic acids such as hydrochloric acid, hydrobromic acid, hydroiodic acid, sulfuric acid, phosphoric acid, and the like, and organic acids such as p-toluenesulfonic, methanesulfonic acid, oxalic acid,  
25 p-bromophenylsulfonic acid, carbonic acid, succinic acid, citric acid, benzoic acid, acetic acid, and the like. Examples of such pharmaceutically acceptable salts are the sulfate, pyrosulfate, bisulfate, sulfite, bisulfite, phosphate, monohydrogenphosphate, dihydrogenphosphate,  
30 metaphosphate, pyrophosphate, chloride, bromide, iodide, acetate, propionate, decanoate, caprylate, acrylate, formate, isobutyrate, caproate, heptanoate, propiolate, oxalate, malonate, succinate, suberate, sebacate, fumarate, maleate, butyne-1,4-dioate, hexyne-1,6-dioate, benzoate,

chlorobenzoate, methylbenzoate, dinitrobenzoate, hydroxybenzoate, methoxybenzoate, phthalate, sulfonate, xylenesulfonate, phenylacetate, phenylpropionate, phenylbutyrate, citrate, lactate,  $\gamma$ -hydroxybutyrate, glycollate, tartrate, methanesulfonate, propanesulfonate, naphthalene-1-sulfonate, naphthalene-2-sulfonate, mandelate, mesylate, and the like. Preferred pharmaceutically acceptable acid addition salts are those formed with mineral acids such as hydrochloric acid and hydrobromic acid, and those formed with organic acids such as maleic acid and methanesulfonic acid.

Salts of amine groups may also comprise quaternary ammonium salts in which the amino nitrogen carries a suitable organic group such as an alkyl, alkenyl, alkynyl, or aralkyl moiety.

Base addition salts include those derived from inorganic bases, such as ammonium or alkali or alkaline earth metal hydroxides, carbonates, bicarbonates, and the like. Such bases useful in preparing the salts of this invention thus include sodium hydroxide, potassium hydroxide, ammonium hydroxide, potassium carbonate, sodium carbonate, sodium bicarbonate, potassium bicarbonate, calcium hydroxide, calcium carbonate, and the like. The potassium and sodium salt forms are particularly preferred.

It should be recognized that the particular counterion forming a part of any salt of this invention is not of a critical nature, so long as the salt as a whole is pharmacologically acceptable and as long as the counterion does not contribute undesired qualities to the salt as a whole.

This invention further encompasses methods employing pharmaceutically acceptable solvates of the compounds of Formula I. Many of the formula I compounds can combine with solvents such as water, methanol, and ethanol to form

pharmaceutically acceptable solvates such as the corresponding hydrate, methanolate, and ethanolate.

This invention also encompasses methods employing the pharmaceutically acceptable prodrugs of the compounds of formula I. A prodrug is a drug which has been chemically modified and may be biologically inactive at its site of action, but which may be degraded or modified by one or more enzymatic or other in vivo processes to the parent bioactive form. This prodrug should have a different pharmacokinetic profile than the parent, enabling easier absorption across the mucosal epithelium, better salt formation or solubility, or improved systemic stability (an increase in plasma half-life, for example).

Typically, such chemical modifications include:

1) ester or amide derivatives which may be cleaved by esterases or lipases;

2) peptides which may be recognized by specific or nonspecific proteases; or

3) derivatives that accumulate at a site of action through membrane selection of a prodrug form or a modified prodrug form; or any combination of 1 to 3, supra.

Conventional procedures for the selection and preparation of suitable prodrug derivatives are described, for example, in H. Bundgaard, Design of Prodrugs, (1985).

As used herein, the term "effective amount" means an amount of compound of the instant invention which is capable of inhibiting, alleviating, ameliorating, treating, or preventing further symptoms in mammals, including humans, which may be due to decreased levels of endogenous growth hormone.

By "pharmaceutically acceptable formulation" it is meant that the carrier, diluent, excipients and salt must be compatible with the active ingredient (a compound of formula I) of the formulation, and not be deleterious to the

recipient thereof. Pharmaceutical formulations can be prepared by procedures known in the art. For example, the compounds of this invention can be formulated with common excipients, diluents, or carriers, and formed into tablets, capsules, and the like. Examples of excipients, diluents, and carriers that are suitable for such formulations include the following: fillers and extenders such as starch, sugars, mannitol, and silicic derivatives; binding agents such as carboxymethyl cellulose and other cellulose derivatives, alginates, gelatin, and polyvinyl pyrrolidone; moisturizing agents such as glycerol; disintegrating agents such as agar agar, calcium carbonate, and sodium bicarbonate; agents for retarding dissolution such as paraffin; resorption accelerators such as quaternary ammonium compounds; surface active agents such as cetyl alcohol, glycerol monostearate; adsorptive carriers such as kaolin and bentonite; and lubricants such as talc, calcium and magnesium stearate and solid polyethylene glycols. Final pharmaceutical forms may be: pills, tablets, powders, lozenges, syrups, aerosols, saches, cachets, elixirs, suspensions, emulsions, ointments, suppositories, sterile injectable solutions, or sterile packaged powders, and the like, depending on the type of excipient used.

Additionally, the compounds of this invention are well suited to formulation as sustained release dosage forms. The formulations can also be so constituted that they release the active ingredient only or preferably in a particular part of the intestinal tract, possibly over a period of time. Such formulations would involve coatings, envelopes, or protective matrices which may be made from polymeric substances or waxes.

The particular dosage of a compound required to treat, inhibit, or prevent the symptoms and/or disease of congestive heart failure in a mammal, including humans,

according to this invention will depend upon the particular disease, symptoms, and severity. Dosage, routes of administration, and frequency of dosing is best decided by the attending physician. Generally, accepted and effective  
5 doses will be from 15mg to 1000mg, and more typically from 15mg to 80mg. Such dosages will be administered to a patient in need of treatment from one to three times each day or as often as needed for efficacy.

In addition, the growth hormone secretagogue compounds  
10 as disclosed herein may be administered to a patient in need of treatment in combination with other growth hormone secretagogues known in the art, and/or with a suitable bone anti-resorptive agent or agents for the prevention or treatment of osteoporosis and/or loss of muscle strength.  
15 Said suitable bone anti-resorptive agents include selective estrogen receptor modulators, bisphosphonates, calcitonin, and hormone replacement therapeutic agents. Additionally, PTH may be administered in combination with said growth hormone secretagogues. Said combination therapy may be  
20 administered concomitantly or sequentially.

The compositions are preferably formulated in a unit dosage form, each dosage containing from about 0.01 to about 500 mg, more usually about 0.5 to about 200 mg, of the active ingredient. However, it will be understood that the  
25 therapeutic dosage administered will be determined by the physician in the light of the relevant circumstances including the condition to be treated, the choice of compound to be administered and the chosen route of administration, and therefore the above dosage ranges are  
30 not intended to limit the scope of the invention in any way. The compounds can be administered by a variety of routes including the oral, rectal, transdermal, subcutaneous, topical, intravenous, intramuscular or intranasal routes. For all indications, a typical daily dose will contain from

about 0.01 mg/kg to about 20 mg/kg of, the active compound of this invention. Preferred daily doses will be about 0.1 to about 10 mg/kg, ideally about 0.1 to about 5 mg/kg. However, for topical administration a typical dosage is about 1 to about 500 mg compound per  $\text{cm}^2$  of an affected tissue. Preferably, the applied amount of compound will range from about 30 to about 300  $\text{mg}/\text{cm}^2$ , more preferably, from about 50 to about 200  $\text{mg}/\text{cm}^2$ , and, most preferably, from about 60 to about 100  $\text{mg}/\text{cm}^2$ .

Suitable dosing ranges of compounds of formula I include 0.01 mg/kg/day to 60 mg/kg/day. Representative pharmaceutical formulations containing compounds of formula I-IV are provided below.

The formulations which follow are given for purposes of illustration and are not intended to be limiting in any way. The total active ingredients in such formulations comprises from 0.1% to 99.9% by weight of the formulation. The term "active ingredient" means a compound of formula I, including but not limited to compounds of formulas II, III, and IV.

#### Formulation 1

Hard gelatin capsules containing the following ingredients are prepared:

<u>Ingredient</u>	<u>Quantity</u> <u>(mg/capsule)</u>
Active Ingredient	30.0
Starch	305.0
Magnesium stearate	5.0

The above ingredients are mixed and filled into hard gelatin capsules in 340 mg quantities.

#### Formulation 2

A tablet formula is prepared using the ingredients below:

	<u>Ingredient</u>	<u>Quantity</u> <u>(mg/tablet)</u>
	Active Ingredient	25.0
	Cellulose, microcrystalline	200.0
5	Colloidal silicon dioxide	10.0
	Stearic acid	5.0

The components are blended and compressed to form tablets, each weighing 240 mg.

10

Formulation 3

A dry powder inhaler formulation is prepared containing the following components:

15	<u>Ingredient</u>	<u>Weight %</u>
	Active Ingredient	5
	Lactose	95

The active mixture is mixed with the lactose and the mixture is added to a dry powder inhaling appliance.

20

Formulation 4

Tablets, each containing 30 mg of active ingredient, are prepared as follows:

25	<u>Ingredient</u>	<u>Quantity</u> <u>(mg/tablet)</u>
	Active Ingredient	30.0 mg
	Starch	45.0 mg
	Microcrystalline cellulose	35.0 mg
30	Polyvinylpyrrolidone	
	(as 10% solution in water)	4.0 mg
	Sodium carboxymethyl starch	4.5 mg
	Magnesium stearate	0.5 mg
	Talc	<u>1.0 mg</u>

Total

120 mg

The active ingredient, starch and cellulose are passed through a No. 20 mesh U.S. sieve and mixed thoroughly. The solution of polyvinylpyrrolidone is mixed with the resultant powders, which are then passed through a 16 mesh U.S. sieve. The granules so produced are dried at 50-60°C and passed through a 16 mesh U.S. sieve. The sodium carboxymethyl starch, magnesium stearate, and talc, previously passed through a No. 30 mesh U.S. sieve, are then added to the granules which, after mixing, are compressed on a tablet machine to yield tablets each weighing 120 mg.

Formulation 5

Capsules, each containing 40 mg of medicament are made as follows:

<u>Ingredient</u>	<u>Quantity</u> <u>(mg/capsule)</u>
Active Ingredient	40.0 mg
Starch	109.0 mg
Magnesium stearate	<u>1.0 mg</u>
Total	150.0 mg

The active ingredient, cellulose, starch, and magnesium stearate are blended, passed through a No. 20 mesh U.S. sieve, and filled into hard gelatin capsules in 150 mg quantities.

Formulation 6

Suppositories, each containing 25 mg of active ingredient are made as follows:

<u>Ingredient</u>	<u>Amount</u>
Active Ingredient	25 mg

Saturated fatty acid glycerides to 2,000 mg

The active ingredient is passed through a No. 60 mesh U.S. sieve and suspended in the saturated fatty acid glycerides previously melted using the minimum heat necessary. The mixture is then poured into a suppository mold of nominal 2.0 g capacity and allowed to cool.

#### Formulation 7

10 Suspensions, each containing 50 mg of medicament per 5.0 mL dose are made as follows:

	<u>Ingredient</u>	<u>Amount</u>
	Active Ingredient	50.0 mg
15	Xanthan gum	4.0 mg
	Sodium carboxymethyl cellulose (11%)	
	Microcrystalline cellulose (89%)	50.0 mg
	Sucrose	1.75 g
	Sodium benzoate	10.0 mg
20	Flavor and Color	q.v.
	Purified water to	5.0 mL

The medicament, sucrose and xanthan gum are blended, passed through a No. 10 mesh U.S. sieve, and then mixed with a previously made solution of the microcrystalline cellulose and sodium carboxymethyl cellulose in water. The sodium benzoate, flavor, and color are diluted with some of the water and added with stirring. Sufficient water is then added to produce the required volume.

30

#### Formulation 8

Capsules, each containing 15 mg of medicament, are made as follows:

Quantity

-61-

<u>Ingredient</u>	<u>(mg/capsule)</u>
Active Ingredient	15.0 mg
Starch	407.0 mg
Magnesium stearate	<u>3.0 mg</u>
Total	425.0 mg

The active ingredient, cellulose, starch, and magnesium stearate are blended, passed through a No. 20 mesh U.S. sieve, and filled into hard gelatin capsules in 425 mg quantities.

#### Formulation 9

An intravenous formulation may be prepared as follows:

<u>Ingredient</u>	<u>Quantity</u>
Active Ingredient	250.0 mg
Isotonic saline	1000 mL

#### Formulation 10

A topical formulation may be prepared as follows:

<u>Ingredient</u>	<u>Quantity</u>
Active Ingredient	1-10 g
Emulsifying Wax	30 g
Liquid Paraffin	20 g
White Soft Paraffin	to 100 g

The white soft paraffin is heated until molten. The liquid paraffin and emulsifying wax are incorporated and stirred until dissolved. The active ingredient is added and stirring is continued until dispersed. The mixture is then cooled until solid.

Formulation 11

Sublingual or buccal tablets, each containing 10 mg of active ingredient, may be prepared as follows:

		Quantity
5	<u>Ingredient</u>	<u>Per Tablet</u>
	Active Ingredient	10.0 mg
	Glycerol	210.5 mg
	Water	143.0 mg
	Sodium Citrate	4.5 mg
10	Polyvinyl Alcohol	26.5 mg
	Polyvinylpyrrolidone	<u>15.5 mg</u>
	Total	410.0 mg

The glycerol, water, sodium citrate, polyvinyl alcohol, and polyvinylpyrrolidone are admixed together by continuous stirring and maintaining the temperature at about 90°C. When the polymers have gone into solution, the solution is cooled to about 50-55°C and the medicament is slowly admixed. The homogenous mixture is poured into forms made of an inert material to produce a drug-containing diffusion matrix having a thickness of about 2-4 mm. This diffusion matrix is then cut to form individual tablets having the appropriate size.

Another formulation employed in the methods of the present invention employs transdermal delivery devices or patches. Such transdermal patches may be used to provide continuous or discontinuous infusion of the compounds of the present invention in controlled amounts. The construction and use of transdermal patches for the delivery of pharmaceutical agents is well known in the art. See, for example, U.S. Patent 5,023,252, the disclosure of which is herein incorporated by reference. Such patches may be constructed for continuous, pulsatile, or on demand delivery of pharmaceutical agents.

Frequently, it will be desirable or necessary to introduce the pharmaceutical composition to the brain, either directly or indirectly. Direct techniques usually involve placement of a drug delivery catheter into the host's ventricular system to bypass the blood-brain barrier. One such implantable delivery system, used for the transport of biological factors to specific anatomical regions of the body, is described in U.S. Patent 5,011,472, the disclosure of which is herein incorporated by reference.

Indirect techniques, which are generally preferred, usually involve formulating the compositions to provide for drug latentiation by the conversion of hydrophilic drugs into lipid-soluble drugs or prodrugs. Latentiation is generally achieved through blocking of the hydroxy, carbonyl, sulfate, and primary amine groups present on the drug to render the drug more lipid soluble and amenable to transportation across the blood-brain barrier. Alternatively, the delivery of hydrophilic drugs may be enhanced by intra-arterial infusion of hypertonic solutions which can transiently open the blood-brain barrier.

The following Examples and Preparations are illustrative of the processes employed in the synthesis of the compounds of the present invention. As would be understood by persons skilled in the art, other synthetic schemes may be employed to prepare the compounds of the instant invention.

#### Example 1

(R)-2-Amino-N-(2-benzyloxy-1-{[5-(4-chloro-phenyl)-3,3-dimethyl-1,1-dioxo-2,3-dihydro-1H-1 $\lambda$ <sup>6</sup>-isothiazol-4-ylmethyl]-ethyl-carbamoyl}-ethyl)-3-fluoro-2-fluoromethyl-propionamide hydrochloride

(4-chlorophenylmethane) sulfonic acid sodium salt was prepared as follows, 4-Chlorobenzylchloride (30 g, 0.186 mol) and Na<sub>2</sub>SO<sub>3</sub> (47 g, 2 eq.) were refluxed for several hours in  
 5 150 mL water. A phase transfer agent like trioctylmethylammonium chloride may be added as described in Tetrahedron Lett. 1984, 25(40), 4553-6. After cooling to room temperature, the solution was extracted with ethyl acetate, the water layer was evaporated and the residue  
 10 suspended in ethanol. The mixture was filtered, the filtrate was concentrated and the solid was dried at 50°C under vacuum. 4-Chlorophenylmethanesulfonate (23.5 g, 55 %; MS (EI): 205 [M]<sup>+</sup> was obtained.

To a solution of (4-chlorophenylmethane) sulfonic acid  
 15 sodium salt, 8.9 g (39.0 mmol) in 20 mL of phosphorus oxychloride at 0°C, was added 11.6 g of phosphorus pentachloride. The reaction mixture was slowly warmed to ambient temperature, stirred 48 h and concentrated to dryness.

20 To a solution of 1,1-dimethylpropargylamine, 3.23 g (39.0 mmol, as described in J. Am. Chem. Soc., 75, 1653 (1954)) in 50 mL of dichloromethane at 0°C was added 6.41 mL (42.9 mmol) of 1,8-diazabicyclo(5.4.0)undec-7-ene. After stirring for 10 min, 8.8 g (39.0 mmol) of the above residue

in 70 mL of dichloromethane was added. The reaction mixture was stirred for 2 h at 0°C and was concentrated to dryness and portioned between ethyl acetate and water. The mixture was acidified to pH = 2.0 with 1 N HCl and was extracted with ethyl acetate. The combined organics were washed with brine, dried over sodium sulfate, filtered and concentrated to dryness. The resulting residue was chromatographed over silica gel using 5% methanol/chloroform as eluant to yield 6.15 g (58%) of the desired product, shown below, as a white solid. <sup>1</sup>H-NMR is consistent with structure; MS (ion spray) 270.3 (M-1); Anal. Calc'd for C<sub>12</sub>H<sub>14</sub>ClNO<sub>2</sub>S: C, 53.04; H, 5.19; N, 5.15. Found: C, 52.54; H, 5.19; N, 4.93. C-(4-Chloro-phenyl)-N-(1,1-dimethyl-prop-2-ynyl)-methanesulfonamide.

To a solution of C-(4-chloro-phenyl)-N-(1,1-dimethyl-prop-2-ynyl)-methanesulfonamide, 5.88 g (22.0 mmol) in 40 mL of ethylene glycol was added 0.3 g of mercury oxide (yellow), 4 mL of water and 6 drops of concentrated sulfuric acid. The mixture was heated at 170 °C for 80 min, then was cooled to ambient temperature, poured into water and extracted with ethyl acetate. The combined organics were washed with brine, dried over sodium sulfate, filtered and concentrated to dryness. The resulting residue was chromatographed on silica gel using chloroform as eluant to yield 4.31 g (68%) of the desired product, shown below, as a tan solid. <sup>1</sup>H-NMR is consistent with structure; MS (ion spray) 288.0 (M-1); Anal. Calc'd for C<sub>12</sub>H<sub>16</sub>ClNO<sub>3</sub>S: C, 49.74; H, 5.56; N, 4.83. Found: C, 49.59; H, 5.50; N, 4.73. C-(4-

Chloro-phenyl)-N-(1,1-dimethyl-2-oxo-propyl)-methanesulfonamide.

5

To a solution of C-(4-chloro-phenyl)-N-(1,1-dimethyl-2-oxo-propyl)-methanesulfonamide, 4.2 g (15.0 mmol) in 60 mL of dimethylformamide was added 1.3 g (31.5 mmol) of sodium hydride 60% dispersion in mineral oil. The reaction mixture was heated at 90 °C for 24 h, then cooled to room temperature and acidified to pH = 3.0 with 1 N HCl. The mixture was extracted with ethyl acetate. The combined organic layers were washed with brine, dried over sodium sulfate, filtered and concentrated to dryness. The residue was chromatographed over silica using chloroform as eluant to yield 3.27 g (80%) of the desired product, shown below, as a tan solid. <sup>1</sup>H-NMR is consistent with structure; MS (ion spray) 270.3 (M-1); Anal. Calc'd for C<sub>12</sub>H<sub>14</sub>ClNO<sub>2</sub>S: C, 53.04; H, 5.19; N, 5.15. Found: C, 52.72; H, 5.18; N, 4.98.

5-(4-Chloro-phenyl)-3,3,4-trimethyl-2,3-dihydro-isothiazole 1,1-dioxide.

25

To a solution of 5-(4-Chloro-phenyl)-3,3,4-trimethyl-2,3-dihydro-isothiazole 1,1-dioxide, 1.5 g (5.5 mmol) in 150

mL of carbon tetrachloride was added 1.5 g (8.25 mmol) of *N*-bromosuccinimide and 0.13 g of 2,2'-azobis(2-methylpropionitrile). The mixture was heated to reflux for 4 h then cooled to ambient temperature. Chloroform was added and the solution was washed with water and brine, dried over sodium sulfate, filtered and concentrated to dryness to yield 1.6 g (83%) of the desired product, shown below, as a beige solid. <sup>1</sup>H-NMR is consistent with structure; MS (ion spray) 349.9 (M-1). 4-Bromomethyl-5-(4-chloro-phenyl)-3,3-dimethyl-2,3-dihydro-isothiazole 1,1-dioxide.

To a solution of 4-bromomethyl-5-(4-chloro-phenyl)-3,3-dimethyl-2,3-dihydro-isothiazole 1,1-dioxide, 1.5 g (4.3 mmol) in 24 mL of absolute ethanol was added 10 mL of ethylamine (70% solution in water). The reaction mixture was stirred 24 h at ambient temperature, then concentrated to dryness. The residue was purified by chromatography on silica gel with methanol/chloroform as eluant to yield 0.21 g (75%) of desired product, shown below, as a tan oil. <sup>1</sup>H-NMR is consistent with structure; MS (ion spray) 313.0 (M-1); Anal. Calc'd for C<sub>14</sub>H<sub>19</sub>ClN<sub>2</sub>O<sub>2</sub>S·0.1CHCl<sub>3</sub>: C, 51.83; H, 5.89; N, 8.57. Found: C, 51.58; H, 6.38; N, 8.04. N-[5-(4-Chloro-phenyl)-3,3-dimethyl-1,1-dioxo-2,3-dihydro-1H-1λ<sup>6</sup>-isothiazol-4-ylmethyl]-ethyl-amine.

To a suspension of N-[5-(4-chloro-phenyl)-3,3-dimethyl-1,1-dioxo-2,3-dihydro-1H-1 $\lambda^6$ -isothiazol-4-ylmethyl]-ethyl-  
 5 amine, 189 mg (0.60 mmol), in 2.9 mL of IPAC were added  
 water (1.7 mL), DCC (136 mg, 0.66 mmol), HOBt (89 mg, 0.66  
 mmol), IPAC (0.6 mL) and N-Boc-O-benzyl-D-serine (177 mg,  
 0.60 mmol). The mixture was allowed to stir for 14 h, then  
 was filtered rinsing with IPAC. The aqueous phase was  
 10 separated. The organic layer was washed with citric acid 0.1  
 M and saturated NaHCO<sub>3</sub>, dried over Na<sub>2</sub>SO<sub>4</sub> and evaporated to  
 yield 195 mg (55%) of the desired product, shown below, as a  
 white-off solid. <sup>1</sup>H-NMR is consistent with structure; MS  
 (ion spray) 492.0 (M-Boc+1). (R)-(2-Benzyl-1-{[5-(4-  
 15 chloro-phenyl)-3,3-dimethyl-1,1-dioxo-2,3-dihydro-1H-1 $\lambda^6$ -  
 isothiazol-4-ylmethyl]-ethyl-carbamoyl}-ethyl)-carbamic acid  
 tert-butyl ester.

-69-

5 To a solution of (R)-(2-benzyloxy-1-[[5-(4-chloro-phenyl)-3,3-dimethyl-1,1-dioxo-2,3-dihydro-1H-1λ<sup>6</sup>-isothiazol-4-ylmethyl]-ethyl-carbamoyl]-ethyl)-carbamic acid tert-butyl ester, 190 mg (0.32mmol) in 1.5 mL of dichloromethane was added 1.5 mL of trifluoroacetic acid.

10 The mixture was stirred at room temperature for 1 h, then poured into diethyl ether (300 mL) and stirred for 2 h. The white precipitate formed was filtered and dried to afford a white solid, which was dissolved in dichloromethane and washed with saturated NaHCO<sub>3</sub> to yield 135 mg (86%) of the

15 desired product, shown below, as a white solid. <sup>1</sup>H-NMR is consistent with structure; MS (ion spray) 492.0 (M+1). (R)-2-Amino-3-benzyloxy-N-[5-(4-chloro-phenyl)-3,3-dimethyl-1,1-dioxo-2,3-dihydro-1H-1λ<sup>6</sup>-isothiazol-4-ylmethyl]-N-ethyl-propionamide.

-70-

5 To a suspension of (R)-2-amino-3-fluoro-2-fluoromethyl-propionic acid methyl ester hydrochloride 250 mg (1.32 mmol, as described in Synthesis, 1994, pp 701-702) in 10 mL of acetonitrile, was added  $\text{Me}_4\text{NOH} \cdot 5\text{H}_2\text{O}$  (400 mg, 2.20 mmol). The mixture was stirred at room temperature under argon for 30

10 min, then di-tert-butyl dicarbonate (432 mg, 1.98 mmol) was added. The mixture was stirred for 48 h, the solvent was evaporated and the residue portioned between water and ether. The aqueous layer was washed with ether, acidified with solid citric acid to pH 3-4 and extracted with ethyl

15 acetate. The combined organic layers were washed with water, brine, dried over  $\text{Na}_2\text{SO}_4$  and evaporated to yield 294 mg (92%) of the desired product, shown below, as a white solid.  $^1\text{H-NMR}$  is consistent with structure; MS (ion spray) 238.1 (M-1); 2-tert-butoxycarbonylamino-3-fluoro-2-fluoromethyl-propionic acid.

20

To a suspension of (R)-2-amino-3-benzyloxy-N-[5-(4-chloro-phenyl)-3,3-dimethyl-1,1-dioxo-2,3-dihydro-1H-1 $\lambda$ <sup>6</sup>-isothiazol-4-ylmethyl]-N-ethyl-propionamide, 260 mg (0.53 mmol), in 3.9 mL of IPAC were added water (3.8 mL), DCC (120 mg, 0.58 mmol), HOBT (78 mg, 0.58 mmol) and 2-tert-butoxycarbonylamino-3-fluoro-2-fluoromethyl-propionic acid (126 mg, 0.53 mmol). The mixture was allowed to stir for 2 h, then was filtered rinsing with IPAC. The aqueous phase was separated. The organic layer was washed with citric acid 0.1 M and saturated NaHCO<sub>3</sub>, dried over Na<sub>2</sub>SO<sub>4</sub> and evaporated to dryness. The residue was chromatographed over silica with ethanol / dichloromethane 2/98 as eluant to yield 210 mg (56%) of the desired product, shown below, as a white-off solid. <sup>1</sup>H-NMR is consistent with structure; MS (ion spray) 613.1 (M-Boc+1). (R)-[1-(2-Benzyloxy-1-[[5-(4-chloro-phenyl)-3,3-dimethyl-1,1-dioxo-2,3-dihydro-1H-1 $\lambda$ <sup>6</sup>-isothiazol-4-ylmethyl]-ethyl-carbamoyl]-ethylcarbamoyl)-2-fluoro-1-fluoromethyl-ethyl]-carbamic acid tert-butyl ester.

To (R)-[1-(2-benzyloxy-1-[[5-(4-chloro-phenyl)-3,3-dimethyl-1,1-dioxo-2,3-dihydro-1H-1 $\lambda^6$ -isothiazol-4-ylmethyl]-ethyl-carbamoyl]-ethylcarbamoyl)-2-fluoro-1-fluoromethyl-ethyl]-carbamic acid tert-butyl ester, 200 mg (0.28 mmol) was added a solution of HCl 10% in ethanol (1.7 mL). The mixture was stirred at room temperature for 4 h, then poured into diethyl ether (300 mL) and stirred for 2 h. The white precipitated formed was filtered and dried to yield 120 mg (66%) of the desired title product, as a white solid.  $^1\text{H-NMR}$  is consistent with structure; MS (ion spray) 613.2 (M+1).

### Example 2

(R)-2-Amino-N-(2-(2,6-difluorobenzyloxy)-1-[[5-(4-chloro-phenyl)-3,3-dimethyl-1,1-dioxo-2,3-dihydro-1H-1 $\lambda^6$ -isothiazol-4-ylmethyl]-ethyl-carbamoyl]-ethyl)-3-fluoro-2-fluoromethyl-propionamide hydrochloride

The compound was prepared in the same manner as Example 1 (MS, ion spray, 649.2 (M+1); overall yield for the two final coupling steps 25%), by using (R)-2-tert-

butoxycarbonylamino-3-(2,6-difluoro-benzyloxy)-propionic acid, obtained as shown below.

To a solution of *N*-Boc-*D*-serine, 1.26 g (6.10 mmol) in 50 mL of dimethylformamide at 0 °C was added sodium hydride 60% dispersion in mineral oil, 0.61 g (15.2 mmol). The mixture was allowed to stir at 0 °C under argon for 30 min, then 2,6-difluorobenzylbromide was added. The mixture was stirred at room temperature for 14 h, Then poured into 30 mL of ice/water and washed with ether. The aqueous layer was acidified with solid citric acid to pH 3-4 and extracted with ethyl acetate. The combined organic layers were washed with water, brine, dried over Na<sub>2</sub>SO<sub>4</sub> and evaporated to yield 152 mg (75%) of the desired product, shown below, as a colorless oil. <sup>1</sup>H-NMR is consistent with structure; MS (ion spray) 330.1 (M-1). (R)-2-tert-Butoxycarbonylamino-3-(2,6-difluoro-benzyloxy)-propionic acid.

### Example 3

(R)-2-Amino-*N*-(2-benzyloxy-1-{[5-(4-chloro-phenyl)-3,3-dimethyl-1,1-dioxo-2,3-dihydro-1H-1λ<sup>6</sup>-isothiazol-4-ylmethyl]-(2-fluoroethyl)-carbonyl}-ethyl)-4,4,4-trifluorobutyramide hydrochloride

-74-

The compound was prepared in the same manner as Example 1  
 5 (MS , ion spray, 631.2 (M+1); yield of the last coupling  
 step 38%), by using N-Boc-2-amino-4,4,4-trifluorobutanoic  
 acid.

## EXAMPLE 4

10 2-(R)-2-(1-Amino-1-cyclopropylcarbonylamino)-3-(2,4-  
difluorophenyl)methoxy propionic acid N-[5-(4-chlorophenyl)-  
3,3-dimethyl-1,1-dioxo-2,3-dihydroisothiazol-4-ylmethyl]-N-  
methanamide hydrochloride

The title compound was prepared according to the methods described in Example 1, using the commercial 1-[(tert-butoxycarbonyl)amino]cyclopropanecarboxylic acid in the last coupling reaction. Yield: 19 mg (73 %); MS (IS): 598.0 [M+H]<sup>+</sup>

## EXAMPLE 5

2-(R)-2-(1-Amino-1-cyclopropylcarbonylamino)-3-(4-fluorophenyl)methoxy propionic acid N-[5-(4-chlorophenyl)-3,3-dimethyl-1,1-dioxo-2,3-dihydroisothiazol-4-ylmethyl]-N-ethylamide hydrochloride

The title compound was prepared according to the methods described in Example 1, using the commercial 1-[(tert-butoxycarbonyl)amino]cyclopropanecarboxylic acid in the last coupling reaction. Yield: 20 mg (35 %); MS (IS): 593.0 [M+H]<sup>+</sup>

Pituitary Cell Culture Assay for Growth Hormone (GH) Secretion

Fifteen 250 g male Sprague-Dawley rats are used for each assay. The animals are killed by decapitation and anterior pituitaries are removed and placed into ice cold

culture medium. The pituitaries are sectioned in small pieces and enzymatically digested using trypsin (Difco) to weaken connective tissue. Pituitary cells are dispersed by mechanical agitation, collected, pooled and then seeded into 5 96-well plates (50,000 cells/well). After 5 days of culture, the cells formed as monolayer (70 - 80 % confluent). Cells are then washed with medium (without phenol red) and incubated for 90 min at 37°C. Afterwards the cells are challenged to secrete GH by the addition of GH 10 secretagogues to the medium. After 45 min at room temperature, the medium is removed, filtered and stored frozen until radioimmunoassays for rat GH were performed. Doses of secretagogue are added in triplicates. Compounds disclosed herein are active in the assay as described. The 15 compounds cause a stimulation of GH secretion resulting in at least 20% increase of the basal level of GH with and EC50 < 500 nM. Preferred compounds caused a 50% increase with an EC50 < 50 nM, and more preferred compounds a 50% increase with an EC50 < 10 nM. Both EC50 and efficacy values were 20 calculated by the 4-parameter logistic equation. Such values were pooled and represented as mean +/- standard error, when appropriate.

## CLAIMS

1. A compound of the Formula I

Formula I

wherein:

R1 is (substituted C<sub>1</sub>-C<sub>6</sub>alkyl)NHR10 or (unsubstituted or substituted C<sub>3</sub>-C<sub>8</sub> cycloalkyl)NHR10;

R10 is hydrogen, C<sub>1</sub>-C<sub>6</sub>alkyl, C<sub>1</sub>-C<sub>6</sub>alkyl(OH), C<sub>1</sub>-C<sub>6</sub>alkylidenyl(OH)R11, or an amino protecting group;

R11 is C<sub>1</sub>-C<sub>6</sub>alkyl, C<sub>2</sub>-C<sub>6</sub>alkenyl, C<sub>1</sub>-C<sub>6</sub>alkyl(O)C<sub>1</sub>-C<sub>6</sub>alkyl, C(O)O-C<sub>1</sub>-C<sub>6</sub>alkyl, aryl, or C<sub>1</sub>-C<sub>6</sub>alkylaryl;

R2 is hydrogen, C<sub>1</sub>-C<sub>6</sub>alkyl, aryl, or C<sub>1</sub>-C<sub>6</sub>alkylaryl;

R3 is unsubstituted or substituted aryl, unsubstituted or substituted C<sub>1</sub>-C<sub>6</sub>alkylaryl, unsubstituted or substituted C<sub>1</sub>-C<sub>6</sub>alkyl(O)-C<sub>1</sub>-C<sub>6</sub>alkylaryl, unsubstituted or substituted C<sub>3</sub>-C<sub>8</sub> cycloalkyl, unsubstituted or substituted (C<sub>1</sub>-C<sub>6</sub> alkyl) C<sub>3</sub>-C<sub>8</sub> cycloalkyl, indolyl, indolinyl, (C<sub>1</sub>-C<sub>6</sub> alkyl) indolyl;

R4 is hydrogen, C<sub>1</sub>-C<sub>6</sub>alkyl, aryl, C<sub>1</sub>-C<sub>6</sub>alkylaryl, or C<sub>2</sub>-C<sub>6</sub>alkenyl;

R5 is hydrogen, aryl, C<sub>1</sub>-C<sub>6</sub>alkylaryl, hydroxy, C<sub>1</sub>-C<sub>6</sub>alkoxy, unsubstituted or substituted C<sub>1</sub>-C<sub>6</sub>alkyl;

R6 and R7 are independently hydrogen, unsubstituted or substituted C<sub>1</sub>-C<sub>6</sub>alkyl, unsubstituted or substituted C<sub>2</sub>-C<sub>6</sub>alkenyl, or R6 and R7 together with the carbon atom to which they are attached form a carbocyclic ring of up to 8

atoms which is optionally partly unsaturated or a substituted C3-C8 cycloalkyl group which is optionally partly unsaturated;

R8 is hydrogen, unsubstituted or substituted C<sub>1</sub>-C<sub>6</sub>alkyl, unsubstituted or substituted aryl, or unsubstituted or substituted C<sub>1</sub>-C<sub>6</sub>alkylaryl;

R9 is hydrogen, C<sub>1</sub>-C<sub>6</sub>alkyl, C<sub>2</sub>-C<sub>6</sub>alkenyl, C<sub>2</sub>-C<sub>6</sub>alkynyl, C<sub>3</sub>-C<sub>8</sub>cycloalkyl, C<sub>3</sub>-C<sub>8</sub>cycloalkenyl, cyano, unsubstituted or substituted aryl, unsubstituted or substituted -O-aryl, unsubstituted or substituted -N-aryl, unsubstituted or substituted -S-aryl, -aryl-aryl(K1)(K2), -O-aryl-aryl(K1)(K2), -N-aryl-aryl(K1)(K2), -S-aryl-aryl(K1)(K2), -O-C<sub>1</sub>-C<sub>6</sub>alkyl, or C<sub>1</sub>-C<sub>6</sub>alkylaryl, wherein K1 is halo or -CF<sub>3</sub>, and K2 is hydrogen, halo or -CF<sub>3</sub> or K1 and K2 together form a methylenedioxy group;

Q is -S(O)<sub>2</sub>- or -C(O)-;

m is a number selected from 1 or 2;

or a pharmaceutically acceptable salt or solvate thereof.

20

2. A compound according to claim 1 having Formula II

Formula II

wherein

R1, R2, R3, R5, R6, R7, R8, R9 and Q are as defined in claim 1 or a pharmaceutically acceptable salt or solvate thereof.

25

3. A compound according to claim 1 or 2 wherein R<sub>3</sub> is selected from unsubstituted or substituted aryl, unsubstituted or substituted C<sub>1</sub>-C<sub>6</sub>alkylaryl, unsubstituted or substituted C<sub>1</sub>-C<sub>6</sub>alkyl(O)-C<sub>1</sub>-C<sub>6</sub>alkylaryl, unsubstituted or substituted (C<sub>1</sub>-C<sub>6</sub> alkyl) C<sub>3</sub>-C<sub>8</sub> cycloalkyl, or a pharmaceutically acceptable salt or solvate thereof.

4. A compound according to claim 3 wherein the unsubstituted or substituted aryl group, unsubstituted or substituted C<sub>1</sub>-C<sub>6</sub>alkylaryl or unsubstituted or substituted C<sub>1</sub>-C<sub>6</sub>alkyl(O)-C<sub>1</sub>-C<sub>6</sub>alkylaryl group contains an aryl moiety selected from phenyl, thiazolyl, pyridyl, naphthyl, thienyl, oxazolyl, isoxazolyl and indolyl optionally substituted by from one to three groups independently selected from C<sub>1</sub>-C<sub>6</sub> alkyl, -OC<sub>1</sub>-C<sub>6</sub> alkyl, -OCF<sub>3</sub>, amide, aryl, aryloxy, SO<sub>2</sub>(C<sub>1</sub>-C<sub>6</sub> alkyl), SO<sub>2</sub>CF<sub>3</sub>, NHamide, carboxamide, sulfonamide, NHsulfonamide, imide, hydroxy, carboxy, nitro, halo, tri(chloro or fluoro)methyl, and cyano, or a pharmaceutically acceptable salt or solvate thereof.

5. A compound according to any one of claims 1 to 4 wherein R<sub>3</sub> is an unsubstituted or substituted aryl group, an unsubstituted or substituted C<sub>1</sub>-C<sub>6</sub> alkylaryl group or an unsubstituted or substituted C<sub>1</sub>-C<sub>6</sub>alkyl(O)-C<sub>1</sub>-C<sub>6</sub>alkyl aryl group wherein:

the C<sub>1</sub>-C<sub>6</sub> alkyl moiety within the unsubstituted or substituted C<sub>1</sub>-C<sub>6</sub> alkylaryl group is methyl, ethyl or propyl;

the C<sub>1</sub>-C<sub>6</sub>alkyl(O)-C<sub>1</sub>-C<sub>6</sub>alkyl moiety within the unsubstituted or substituted C<sub>1</sub>-C<sub>6</sub>alkyl(O)-C<sub>1</sub>-C<sub>6</sub>alkyl aryl group is a moiety of formula -CH<sub>2</sub>OCH<sub>2</sub>-;

the unsubstituted or substituted aryl moiety is phenyl, naphthyl, thiazolyl, indolyl, 2-fluorophenyl, 3-fluorophenyl, 4-fluorophenyl, 2,3-difluorophenyl, 2,4-difluorophenyl, 2,5-

difluorophenyl, 2,6-difluorophenyl, 3,4-difluorophenyl, 3,5-  
 difluorophenyl, 2,4,6-trifluorophenyl, 2,4,5-  
 trifluorophenyl, 2,3,6-trifluorophenyl, 2,3,5-  
 trifluorophenyl, 2-chlorophenyl, 3-chlorophenyl, 4-  
 5 chlorophenyl, 2,6-dichlorophenyl, 2-fluoro-6-chlorophenyl,  
 2-fluoro-3-chlorophenyl, 2-fluoro-4-chlorophenyl, 2,6-  
 difluoro-3-chlorophenyl, 4-trifluoromethylphenyl, 3-  
 trifluoromethylphenyl, 2-trifluoromethylphenyl, 2-fluoro-5-  
 trifluoromethylphenyl, 4-trifluoromethoxyphenyl, 3-  
 10 trifluoromethoxyphenyl, 2-trifluoromethyl, 2-cyanophenyl, 3-  
 cyanophenyl, 4-cyanophenyl, 4-methanesulphonylphenyl, or 2-  
 methyl thiazolyl;  
 or a pharmaceutically acceptable salt or solvate thereof.

15        6. A compound according to any one of claims 1 to 5  
 wherein R1 is selected from  $-\text{C}(\text{CH}_2\text{F})_2\text{NH}_2$ ,  $-\text{C}(\text{CH}_2\text{F})(\text{CH}_2\text{CH}_2\text{F})\text{NH}_2$ ,  
 $-\text{C}(\text{CF}_3)(\text{CH}_3)\text{NH}_2$ ,  $-\text{C}(\text{CH}_2\text{CH}_2\text{F})_2\text{NH}_2$ ,  $-\text{C}(\text{CH}_2\text{CH}_3)(\text{CH}_2\text{CF}_3)\text{NH}_2$ ,

or a pharmaceutically acceptable salt or solvate thereof.

20

25        7. A compound according to any one of claims 1 to 6  
 wherein R6 and R7 are each  $\text{C}_1\text{-C}_3$  alkyl or form a five or six  
 membered carbocyclic ring; or R6 and R7 are independently  
 $\text{C}_1\text{-C}_6$ alkyl or  $\text{C}_2\text{-C}_6$ alkenyl, in which one or both groups are  
 substituted by one, two, or three halo atoms; or R6 is  
 hydrogen and R7 is  $\text{C}_1\text{-C}_6$ alkyl,  $\text{C}_2\text{-C}_6$ alkenyl which is  
 substituted by one, two, or three halo atoms; or R6 and R7  
 together with the carbon atom to which they are attached may  
 form a  $\text{C}_3\text{-C}_8$ cycloalkyl group which is optionally partly  
 30 unsaturated and which is substituted by one, two, or three  
 halo atoms;  
 or a pharmaceutically acceptable salt or solvate thereof.

8. A compound according to any one of claims 1 to 7 wherein R4 is hydrogen or methyl, or a pharmaceutically acceptable salt or solvate thereof.

5

9. A compound according to any one of claims 1 to 8 wherein R5 is hydrogen, C<sub>1</sub>-C<sub>6</sub>alkyl, C<sub>1</sub>-C<sub>6</sub>alkoxy, C<sub>1</sub>-C<sub>6</sub>alkyl which is substituted by hydroxy or C<sub>1</sub>-C<sub>6</sub>alkyl which is substituted by one, two, or three halo atoms, or a pharmaceutically acceptable salt or solvate thereof.

10

10. A compound according to any one of claims 1 to 9 wherein R8 is hydrogen, C<sub>1</sub>-C<sub>6</sub>alkyl, benzyl, C<sub>1</sub>-C<sub>6</sub>alkyl which is substituted by hydroxy, C<sub>1</sub>-C<sub>6</sub>alkyl which is substituted by one, two, or three halo atoms, phenyl substituted by one, two, or three halo atoms or benzyl substituted by one, two, or three halo atoms, or a pharmaceutically acceptable salt or solvate thereof.

15

20

11. A compound according to any one of claims 1 to 10 wherein R9 is selected from the group consisting of unsubstituted or substituted thienyl, unsubstituted or substituted naphthyl, unsubstituted or substituted phenoxy and unsubstituted or substituted phenyl; wherein the substituents when present are each independently selected from the group consisting of halo, methyl, ethyl, propyl, t-butyl, trifluoromethyl, trifluoromethoxy, methoxy, ethoxy, cyano, methylsulphonyl, phenyl, phenoxy, thienyl, pyridyl, thiazolyl, oxazolyl, nitro, CONH<sub>2</sub>, furanyl, benzothiophenyl and benzofuranyl; or a pharmaceutically acceptable salt or solvate thereof.

25

30

12. A compound of according to claim 11 wherein R9 is selected from phenyl, 4-methylsulphonylphenyl, 3-

methysulphonylphenyl, 4-fluorophenyl, 2-fluorophenyl, 3-fluorophenyl, 3-chlorophenyl, 2-chlorophenyl, 4-chlorophenyl, 4-t-butylphenyl, 4-trifluoromethylphenyl, 3-trifluoromethylphenyl, 4-nitrophenyl, 3-nitrophenyl, 4-bromophenyl, 3-bromophenyl, 2-bromophenyl, 4-methylphenyl, 3-methylphenyl, 4-phenylphenyl, 3-phenylphenyl, 4-phenoxyphenyl, 3-phenoxyphenyl, 4-cyanophenyl, 3-cyanophenyl, 4-carbamoylphenyl, 4-methoxyphenyl, 3-methoxyphenyl, thienyl, thiazolyl, pyridyl, phenoxy, 4-chlorophenoxy, 2,3-dichlorophenyl, 3,4-dichlorophenyl, naphthyl, oxazolyl, 2,4-difluorophenyl, 3,4-difluorophenyl, 3,5-difluorophenyl, 2,3-difluorophenyl, 2,6-difluorophenyl, 2,5-difluorophenyl, 2-fluoro-3-chlorophenyl, 4-ethylphenyl, 4-ethoxyphenyl, 3,4,5-trifluorophenyl, 3-fluoro-4-chlorophenyl and 4-carbamoylphenyl;  
or a pharmaceutically acceptable salt or solvate thereof.

13. A pharmaceutical formulation comprising one or more compounds according to any one of claims 1 to 12 or a pharmaceutically acceptable salt or solvate thereof, and one or more pharmaceutically acceptable diluents or carriers therefor.

14. A pharmaceutical formulation according to claim 13 wherein the formulation further comprises one or more growth hormone secretagogue compounds and/or a bone-antiresorptive agent.

15. A process for producing a compound of Formula I as defined in any one of claims 1 to 12 comprising coupling a compound of Formula XI or XIb

with a compound of formula XIII

5

wherein R1, R2, R3, R4, R5, R6, R7, R8, R9 and Q are as defined in any one of claims 1 to 12.

10

16. A process for producing a compound of Formula I as defined in any one of claims 1 to 12 comprising deprotecting a compound of Formula

15 wherein R2, R3, R4, R5, R6, R7, R8, R9, m and Q are as defined in any one of claims 1 to 12, and PG is an amino protecting group.

17. A process for producing a compound of Formula I as defined in any one of claims 1 to 12 comprising coupling a compound of Formula

5

with a compound of formula XIV

10

HOOC-R1

**XIV**

wherein R1, R2, R3, R4, R5, R6, R7, R8, R9 and Q are as defined in any one of claims 1 to 12.

15

18. A compound according to any one of claims 1 to 12 for the treatment of the human or animal body by therapy.

19. Use of a compound according to any one of claims 1 to 12 or a pharmaceutically acceptable salt or solvate thereof in the manufacture of a medicament for the treatment of a physiological condition which may be modulated or ameliorated by an increase in endogenous growth hormone.

20. A method of using a compound of claim 1 or 2 or a pharmaceutically acceptable salt or solvate thereof

for the treatment of a physiological condition which may be modulated or ameliorated by an increase in endogenous growth hormone, which method comprises administering to an animal in need of said treatment an effective amount of a compound of formula I.

5

Abstract**GROWTH HORMONE SECRETAGOGUES**

5

This invention relates to novel compounds which are useful in the modulation of endogenous growth hormone levels in a mammal. The invention further relates to novel intermediates for use in the synthesis of said compounds, as well as novel processes employed in these syntheses. Also included are methods of treating a mammal which include the administration of said compounds.
